Participating Organisations

To complete this section, you will need your organisation's identification number (OID). Since 2019, the Organisation ID has replaced the Participant Identification Code (PIC) as unique identifier for actions managed by the Erasmus+ National Agencies.

If your organisation has previously participated in Erasmus+ with a PIC number, an OID has been assigned to it automatically. In that case, you must not register your organisation again. Follow this link to find the OID that has been assigned to your PIC: [Organisation Registration System](#)

You can also visit the same page to register a new organisation that never had a PIC or an OID, or to update existing information about your organisation.

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners)

The Polytechnic Institute of Santarém (IPSantarém) is a Portuguese public Higher Education Institution (HEI) with more than 35 years of experience in the fields of higher education and applied research. At the service of society, IPSantarém is committed to the high-level qualification of the citizens, destined to the production and diffusion of the knowledge, creation, transmission and diffusion of the professional knowledge, culture, science, technology, arts, guided research and experimental development, emphasizing the centrality of the student and the surrounding community, within an international frame of reference.

The IPSantarém is recognized as a pole of development and a reference in training, culture and research developed in the region, created in the 70's, currently comprises five Schools, four in the city of Santarém (Education, Management and Technology, Health, and Agriculture Sciences) and one in the city of Rio Maior (Sport Sciences). Integrated in the Institute are also the Social Services, which provide students with accommodation, scholarships, canteens, medical support, as well as a set of sports facilities for the practice of different modalities, some extensive to the community of the city. IPSantarém promotes institutional cooperation as well as the effective mobility of all its agents, both nationally and internationally, especially in the European higher education area and in the community of Portuguese-speaking countries. It participates in activities linked to society, such as the dissemination and transfer of knowledge, as well as economic valuation of scientific knowledge, and ensures that all duly qualified citizens have access to higher education and lifelong learning. During 2020, 54 research and technology transfer projects have been active in IPSantarém. Much of our research is supported by research programs like Erasmus+ and Portugal 2020. Some of these projects are developed under the research centre hosted by IPSantarém, Life Quality Research Centre (CIEQV) which acts in many different scientific areas.

The members of the group came from the School of Management and Technology and from the School of Education. The Higher School of Management & Technology of Santarém (ESGT-IPSantarém) trains students at the level of higher professional courses, bachelor or master in the areas of Management and Technology. Students from this school can become company directors, managers, administrators, accountants, marketing managers, financial managers, international business specialists, systems analysts and programmers, information systems consultants, systems specialists, or multimedia specialists. At the Master's level, the school trains managers and professionals in specialised areas such as Social Economics, Accounting and Finance, or Health.

The Higher School of Education of Santarém (ESE-IPSantarém) is aimed at the training of teachers (pre-school, primary and lower-secondary school) and other educational specialists (socio-cultural animators; social educators and education and multimedia communication technicians, especially focused on the education domain). As an integral part of the higher education system, in the polytechnic branch, its courses are oriented mainly towards the respective practical components (Pedagogical Practicum in case of courses aimed at teacher training and Internship Period in case of other courses). It also contains several research components that promote reflection, conceptualization and creation of theoretical frameworks that try to frame scientifically its training activity which is divided into three different categories: initial training (bachelor), in service training and specialized training, namely through post-graduation and master courses focused on education, especially on pedagogical supervision, curricular development and organization, special needs education, education and multimedia communication and social education.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

The team members of the project have participated in international funded projects and have the competencies to lead the activities proposed. In some of these projects that ESE-IPSantarém had been involved in the past few years, the SDG has been also present, in several perspectives (ex: Erasmus Intensive Programs: "Observing, leaving and sharing your environment. Learning Outdoor"; "Sustainable Development"; "Early Years-discovering, learning and creating with all senses"; "Which children shall we leave to the planet. Training the teachers to Environmental Economy and inspire their practices in Education to Sustainable Development").

Susana Leal is Assistant Professor in ESGT-IPSantarém. She holds a PhD in Management, under the topic of Organizational Behaviour and Corporate Social Responsibility, and a Master's in Statistics and Information Management. She conducts research activities on Sustainability, Corporate Social Responsibility, Ethics, Management, Quality of Life at Work, and Social Economy topics. She is currently a full member of the Life Quality Research Center at Polytechnic Institute of Santarém. ORCID 0000-0002-8796-8289

Sandra Oliveira is Assistant Professor in ESGT-IPSantarém. She holds a PhD in Health Economics, under the topic "The demand for preventive care and health insurance". She is the coordinator of the postgraduate course in Management of Health Care Units in IPSantarém. She develops research activities in demand for preventive health care and in micro econometrics models. She is a member of the "Studies and Research in Health Center of the University of Coimbra" and also a member of the International Health Economics Association. ORCID 0000-0003-4925-9227

Carla Vivas is Assistant Professor in Management and Strategic Management at the ESGT-IPSantarém. Carla holds a PhD in Management, specializing in economics and decision sciences. Her research focuses on strategic management, innovative business models, supply chain management and logistics, accounting for economic, environmental, and social concerns. She has been involved in applied projects, as a researcher with close interaction with stakeholders in a system-level holistic approach for positive alignment of value creation and focuses on sustainability in innovative business models. She had also management responsibilities in IPSantarém and School of Management and Technology. ORCID 0000-0003-3694-8541

Ana Loureiro is an Assistant Professor in the Department of Educational Technologies at ESE-IPSantarém where she coordinates a master's program in Digital Education Resources and a bachelor's in Multimedia Production in Education, and she is a Researcher at LE@D - Distance Education and eLearning Lab (Open University, Lisbon). She holds a PhD in Multimedia in Education. Her research interests are: digital literacy, online learning, virtual worlds, Technology Enhanced Learning (TEL), Open Educational Resources (OER). ORCID 0000-0003-1322-3070

Luís CS Barradas graduated in Informatics Engineering; holds a MSc in Electrical and Computer Engineering, and a PhD in Informatics Engineering. His main research interest is focused in finding new methods supported with state-of-the-art information technologies aiming to bridge the gap between the voice-of-the-customer and the enterprises' NPD Teams. Luís has been an assistant lecturer from 2001 to 2009 at Polytechnic Institute of Castelo Branco, and an Assistant Professor at Polytechnic Institute of Santarém (Portugal) from 2009 to the present. ORCID 0000-0003-1326-9546

João Nascimento is graduated in Management Informatics; Holds a MSc in Management – Organization Information Systems. His main research interest is focused in Information Systems Development, Business Analysis and Project Management. João was a CIO in an automotive parts production enterprise and an IT consultant. João has been a lecturer since 1998 to present (Assistant Professor since 2015) at IPSantarém. ORCID 0000-0002-4283-58

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

The University of Central Lancashire, Cyprus (UCLan Cyprus) is recognised for its commitment to exceptional teaching, innovative learning, outstanding and impactful research, creative thinking and knowledge transfer that adds value to socio-economic and scientific development across frontiers. UCLan Cyprus offers a wide range of UG and PG courses under the Schools of Sciences, Business and Management, and Law, offering a unique and innovative curriculum reflecting modern industry practices and needs. The aim of UCLan Cyprus is to develop future business leaders and international entrepreneurs, with the skills and competencies for success in the modern global economy. Partnerships are established with industry partners and communities within Cyprus, the Eastern Mediterranean, Europe, the Middle East and beyond, resulting in collaborations which have mutually benefited students, staff, industry partners and the community at large. UCLan Cyprus is accredited by the UK and Cyprus Agencies of Quality Assurance and Accreditation in HE. Many courses are also accredited by professional and statutory bodies, ensuring the standards expected by today's businesses. Research Centres established at UCLan Cyprus include the Centre of Interdisciplinary Science Promotion & Innovative Research Exploration (InSPIRE), the Centre for Entrepreneurial Development, Alliance and Research (CEDAR), and the Cluster of Innovative Education, Linguistics & Literature (CIELL).

UCLan Cyprus is the only University and one of the biggest employers in its region with over 210 employees. Academic faculty are distinguished for their pioneering initiatives and engagement with industry, community, entrepreneurs, and other stakeholders, contributing to the University's vision to be recognised as a world-class, research-led University, competing responsibly, successfully and sustainably within a national and international market.

Academic staff from both the School of Sciences and the School of Business and Management will be involved in the implementation of the project, building a multidisciplinary team of experts. The team of researchers brings extensive experience in participating and leading research innovation & development projects funded by European (Erasmus+, Horizon 2020), national and international funding bodies. Their experience extends from leading and managing Work Packages and tasks to organising engagement and dissemination activities, publishing in high-quality refereed journals and scientific conferences, hosting workshops and scientific conferences, amongst other scholarly activities.

The School of Sciences adopts an interdisciplinary approach conducting research in various fields including development and evaluation of Educational Technology, Immersive Technologies (VR/AR/MR), Educational Games, Ubiquitous Computing, Software Engineering, Mobile Systems, Responsible Research and Innovation, Gamification, Ethics and Gender Equality, Data Management, Computer Networks, Web Design and Development, amongst others.

The School of Business and Management places academic research at the core of its strategic mission and aspires to become one of the leading local business schools. Its research strategy builds on five strands: advancing theoretical and conceptual thinking; broadening expertise in terms of research methodologies; informing on best practice; contributing to the policy debate; and building partnerships across networks of stakeholders. There are 5 research clusters in the school: Governance and Finance, Entrepreneurship, Hospitality and Tourism, International Business, Education and Linguistics. The School in collaboration with CEDAR is very active in terms of research cooperation, knowledge transfer and engagement with industry, SMEs, family firms, and entrepreneurs across the business life cycle.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

Equitable and quality education, promoting educational opportunity for all, freedom of speech and enquiry, and sustainability are core pillars of UCLan Cyprus' values. These values are aligned with the project objective. Activities promoted in the context of Education for SD include student internships, participation in scientific competitions and R&D projects, and actively engaging students in research activity. By cultivating a culture of dynamic partnerships between academic, industry, community and public authorities, the aim is to prepare students to become the next generation of responsible leaders, competent and ethical professionals, possessing the knowledge, skills and enhanced aptitudes necessary to succeed in a global work environment. In doing so, it is essential to recognise the genuine need for closing the gap that exists in SD at Higher Education, which is the focus of the project.

Furthermore, UCLan Cyprus is a Member of Sustainable Development Solutions Network (SDSN). SDSN mobilizes global scientific and technological expertise to promote practical solutions for SD. The aim of SDSN's guide on 'Accelerating Education for the SDGs in Universities' is to empower HEIs to provide all learners with the knowledge, skills and mindsets to contribute to solving the world's SD challenges.

Contribution to the development of an immersive game: UCLan Cyprus team has experience in evaluating the quality of user experience, user requirements gathering and analysis, design and development of educational technologies, including mobile games with high interactivity and immersive features.

Contribution to MOOC/Webinars: In recognition that HEIs are valuable contributors to the economy and society, UCLan Cyprus has formulated a clear CSR strategy, and strives to equip students with skills and enhanced aptitudes which are in high demand in the marketplace. The socioeconomic impact of UCLan Cyprus is derived through knowledge creation, innovation, R&D, and via the direct and indirect income streams flowing into the surrounding economy. The established strategies will contribute to the relevant SDGs.

UCLan Cyprus faculty members bring an essential added value to the project:

- Prof. Irene Polycarpou is the Head of the School of Sciences at UCLan Cyprus, Director of InSPIRE Research Centre, and an elected board member of the European Office Cyprus. Her research focuses on STEM education and educational technologies with emphasis on interactive multimedia for education, design and development of educational software, and e-learning.

- Dr Nearchos Paspallis is an Associate Professor in software engineering and distributed systems. He has experience in EU-funded projects from FP5 to H2020, Erasmus+ and COST projects. He will contribute to the development of the immersive educational platform.

- Dr Louis Nisiotis is a Lecturer in Computing, specialising in Immersive Technologies, and their application in Cyber-Physical-Social Systems and Education. His research interests include VR/AR/MR/XR, HCI, Educational Multi-User Virtual Environments, CSCW, Virtual Communities, Sociability, Presence and Immersion in Virtual Worlds.

- Dr Andriani Piki is a Lecturer in Computing. Her research focuses on learner engagement with educational and mobile technologies, inclusive technologies, CSCL, mobile and contextual learning.

- Dr Josephina Antoniou is an Assistant Professor in Computing. Her research interests include responsible design/development of educational platforms, Quality of User Experience/ UX design, using technology to promote the SDGs, SDGs and the assessment of ethical impacts, ethics of emerging technologies.

- Dr Fanos Telekas is a lecturer in Innovation and Entrepreneurship and Director of CEDAR Research Centre. His research interests include Creative Decision-Making, Creative Problem-Solving, Innovation and Entrepreneurial Growth, Sustainability and Social Responsibility.

Accreditation

Accreditation Type	Accreditation Reference
Erasmus Charter for Higher Education	B MECHELE14

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

Thomas More is, with more than 15.000 students and 1.400 employees, the largest university college in Flanders, offering over 30 Dutch-taught and 5 English-taught bachelor degree programmes in the province of Antwerp. Thomas More has a lot of experience in managing projects i.e., intensive programmes, GRU learning partnerships and Leonardo partnerships and participation in transversal projects. In our TM vision on education we stress the fact of inclusive education, design for all, interdisciplinary education and cooperation which we also want to implement in the project. With Thomas More (1478-1535) the university college follows in the footsteps of the English humanist, scientist and author. In addition, the name "More" also refers to more course programs, more regional spread, more cooperation agreements, more horizons.

The Early Childhood Teacher Training department at Thomas More University College uses an experiential pedagogy as a model of education. Starting from an experiential pedagogy, well-being and involvement are seen as key elements in the learning of people. Our teacher training department is located in the city of Mechelen. Mechelen is a very (culturally) diverse middle range city (100.000 inhabitants) in Belgium. Our teacher training department wants to be anchored within the local community of Mechelen, be a part of the city and explore the city as a rich learning environment. Over the years Thomas More Mechelen has gained experience in the field of though different initiatives and projects. The initiatives listed below take different forms but are all connected through the notions of sustainability (Sustainable cities and communities, climate action, reducing inequality). School projects on sustainable parental involvement, social challenges like diversity, topics on city gardening, walking, exploring the city through children's eyes (funded by the city of Mechelen). Recently, in cooperation with the architectural design department of Thomas More and Samenlevingsopbouw, we have developed a play-bike for teachers and social workers to reach and inform (Mechelen) parents with young children living in risk of poverty and social exclusion about school participation and playing as learning.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

We see this project as an opportunity to provide future teachers with the necessary tools to meet the various social needs as a world citizen with a view to the development of all toddlers.

Students from our teacher training program can therefore be the link in sustainability to achieve change as a future teacher with their toddlers in different internship contexts and in the classroom of today and tomorrow. With the expansion of our preschool lab, together we want to make preschool education physically central as a place of practice, in between space, classroom and educator to meet societal needs for tomorrow's teacher.

The relationship with sustainability is therefore very close. With the kindergarten lab as an in-between space, it is a place in between the training units and the internships which helps make school learning possible. It creates a distance to the complex reality of the internships. A lot happens during an internship day at a specific school making it difficult for students to continue to oversee and relate to it all. In the hands-on classroom, students can purposefully compartmentalize the classroom reality. Approach it piecemeal through exercises, demonstrations, observations, working out installations and classroom environments. It is a place where we can experience ideas, T(t)heory, concepts and principles we bring (from classes, views, internships...).

Also within our current curriculum we have different course sections such as creative thinking, education and society, where sustainable themes and complex societal challenges are approached from sustainability perspective. Skills and/or expertise of key persons involved in this project:

All of our team members show a high level of involvement when it comes down to project work in the field of experiential learning, learning through play and creating conditions to optimise the well-being of all children.

- Sarah Coorevits is bachelor in early childhood education. Her expertise focuses within our program on sustainability in education and society as well as in educational organization and policy. She supervises students within the course unit engagement where they engage in the different themes of the sustainable development goals.

- Esther Laureys has master degree in pedagogical sciences and is a staff member at the organization Tumult. Tumult is an organization whose goal is to help children and youth live together peacefully. From her personal commitment and expertise, she contributes to providing future teachers with the necessary tools to meet our social challenges as a world citizen.

- Els Teunissen has master degree in pedagogical sciences. She is trainee-practice coordinator of the early childhood department and also engaged in different projects where sustainability is paramount, such as the kindergarten lab and the lending service.

- Barbara De Jonge is a lecturer in training and education sciences. Drawing on research work and expertise in engagement with parents, she prepares students for social challenges. Working with external stakeholders and the local community provides many opportunities for future teachers to see from sustainability perspectives. As a teacher of reflective skills, it is important to reflect on the development of a teaching style that contributes to various social challenges and an inquisitive attitude.

Learnmera Oy (E10176763 - FI)**Partner organisation details**

Legal name	Learnmera Oy
Country	Finland
Region	Helsinki-Uusimaa
City	Espoo
Website	www.learnmera.com

Profile

Type of Organisation	School/Institute/Educational centre – Adult education
----------------------	---

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

Learnmera Oy is a private adult education provider and translation company, focused mainly on corporate clients in the greater Helsinki area providing private executive business language lessons. Courses are offered in the major Nordic and European languages, but also beginner's courses in English, Finnish, Swedish, French, German and Russian are offered. Learnmera Oy has considerable in-house experience in educational resources, website creation and mobile application content building. Their website (TLM) has a member base of around 31,000 teachers worldwide. It is this technical and creative expertise that Learnmera can bring to a project.

Learnmera has also been the coordinator for a national e-learning project and a national m-learning project contracted by The Swedish Cultural foundation in Finland.

Teaching material made by Learnmera can be found (free of charge) in different languages on Scribd.com, TeachersPayTeachers, SlideShare and many other platforms on the internet.

Other relevant project products are the TOI EU project Info4Migrants portal also developed by Learnmera, www.vardsvenska.fi – Swedish for health care personnel and www.thelanguagemenu.com – Tools for teachers.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

Learnmera Oy is a private adult education provider in the greater Helsinki area providing business language lessons. Courses are in the major Nordic and European languages, as well as beginner's courses in English, Finnish, Swedish, French, German and Russian. The nature of the work means that they teach many migrants and therefore help them with their needs outside the classroom.

Learnmera Oy has considerable experience in educational resource, website and mobile app content creation. Their website (www.thelanguagemenu.com) has a member base of around 31,000 teachers worldwide. In addition to language training, Learnmera offers translations, proofreading, editing, voice-overs and subtitling for corporations.

Learnmera develops websites, web portals and phone applications for both Android and iOS.

Learnmera has extensive experience leading dissemination/valorisation and working with social media for EU project dissemination. The Learnmera staff has worked on over 40 EU and domestic projects. They have worked on several projects involving integration and language learning for immigrants. The company has been involved in several EU projects, TOI, Justice and Mobility projects since 2008, both as partner and coordinator with excellent reviews from the Finnish NA.

- Veronica Gelfgren – Director / Owner / English & Swedish teacher, researcher & content creator. A language entrepreneur, Veronica has worked as an executive language teacher in Swedish, English and Finnish for corporate clients for 20 years. She has developed customized needs-based language training and specializes in creating study materials that can be found online at Scribd.com. She has coordinated and partnered in a dozen domestic and EU language-related projects, served as content developer.

- Eric Gelfgren – Board member. Has an associate degree in Engineering and an MBA in Marketing and International Business with 35 years of experience in the financial services industry. The most recent 15 years have been focused on business development, particularly within sustainability and responsible investments.

- Akanksha Maurya – IT. Akanksha holds a Master's degree in Computer Applications and Information Technology from Gujarat University, India. She currently works as a web developer and as a coordinator for mobile app development at Learnmera Oy and as a JavaScript Consultant at Klevu Oy.

- Marja-Liisa Helenius – Translation coordinator / researcher & content creator. Has a Master's Degree in English Philology from University of Helsinki. Currently translator, project worker and translation coordinator at Learnmera Oy and Project Manager and Secretary of the Board at Learning for Integration, an NGO promoting language learning and integration of immigrants.

- Sofia Nunes Mexia – Admin / project researcher and content creator. Sofia has an education in business administration and management. She is the main administrator and content creator.

- Naomi Palmer – Project Manager. Has a BSc degree in Marketing and New Media. Now working for Learnmera completing administration, research and content creating. Previous work includes creating websites and social media content, content creation and product management.

- Lesley Champion – Project Administrator. Having worked in various sectors some of which include, hotel and travel, golf and leisure, finance, real estate and private health care.

- Susanne Ehn – Project Administrator. Has an education in HR. She has worked within both private and public sector in different positions.

- Ellen Olsen - Project Administrator. Has an education in bookkeeping and accounting and has been working in finance and payroll since 2006.

- Eveliina Kauhanen - Project Administrator. Eveliina is a project worker at Learnmera Oy. She holds a Master's degree in Adult Education from University of Helsinki, incl. sociological studies in Paris Descartes University.

Country	Italy
Region	Lazio
City	Rome
Website	www.galileo.it

Profile

Type of Organisation	School/Institute/Educational centre – Adult education
----------------------	---

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

Galileo.it S.r.l. is specialised in realizing training modules by using ICT. It co-operates with several ICT and vocational training expert bodies in order to arrange and spread the FTS (Flexible Training System protocols).

Galileo.it have a lot of experience in flipped learning, in innovative methodologies and in the creation of didactic materials and in training for the active citizenship training for migrants and asylum seekers and in adult training for HoReCa sector.

Galileo.it have participated in projects in which he created educational materials to propose new ways of healthy cooking by keeping under control the carbon footprint of the dishes that we put on our tables. Galileo.it has been involved in many projects that had as their primary purpose the development of a new environmental awareness and a new way to take care of their health through simple measures that consider the impact of their choices on the environment around us.

Language Solution is a Division of Galileo.it dedicated to language training and the creation of blended tools for language adult training.

In 2009 Galileo.it won the label for creativity and innovation for the interactive English course designed for McDonald's Italy. In 2012 Galileo.it won the European Label for innovative projects in language teaching and learning for the Multimedia kit for basic English prepared for McDonald's Italy.

Galileo was partner of many EC Projects funded by Leonardo da Vinci, Grundtvig and other EC initiatives and partner of many projects funded by Italian Regions and Italian Government.

Galileo.it administrator was researcher and writer of the chapter on "New technologies for tourism" in the "OFFICIAL REPORT ON TOURISM", edited every two years or yearly, promoted by the Italian Government, from the SIXTH REPORT since the FOURTEENTH REPORT, researcher and writer of the chapter on "vocational training for tourism" from the FIFTH REPORT since the ELEVENTH one and researcher and writer of the chapter on "social tourism" in the 2009 "OFFICIAL REPORT ON TOURISM" edition.

As partner of Consorzio Lavoro e Ambiente, Galileo.it made didactic material and tools for the Erasmus+ project "FLIP - Flipped Learning in Praxis".

At national level, in collaboration with ANTEAS SERVIZI (National association all active age for solidarity), it has promoted the creation of the Solidarity Banks of Time. In collaboration with Fitel (Italian federation free time) has promoted numerous ICT training courses for seniors throughout the national territory and projects for the promotion of the elderly as an active resource of society. In collaboration with and Etsi (Italian social tourism institution) has promoted numerous ICT training courses for seniors throughout the national territory and in the project "The virtuous circle: the elderly and the adolescents help each other" promoted interaction and exchange between grandparents and grandchildren. In collaboration with CTG - Youth Tourist Center has developed projects of inclusion and exchange between young and old in circles, parishes.

We have 4 paid employees and 10 part-time staff, about 300 learners and about 10 part-time staff and 5 volunteers involved in partners activities.

In 2005 the Italian Ministry of Education, the Ministry of Labour and the European Commission (Education and Culture) gave to Consorzio Lavoro e Ambiente the European Label for innovative projects in language teaching and learning for the project and product PANGLOS made in collaboration with Language Solution - Division of Galileo.it.

Galileo.it S.r.l. is specialized in realizing training modules by using ICT. It co-operates with several ICT and vocational training expert bodies in order to arrange and spread the FTS (Flexible Training System protocols).

Galileo has made materials for self-training on several topics. Galileo staff is able to make clips and also self-training modules.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

We will involve in the project staff able to prepare materials and internet tools and experts in didactic. We have experts in: innovation, new applied technologies, local and cultural development, new forms of language learning, culture, food education, and use of creativity tools, adult education and lifelong learning. The ability of our staff to create interactive tools and dissemination materials has allowed, in all the projects in which Galileo.it took part, to have a maximum dissemination of results and the creation of modern and dynamic materials.

The experience gained in past projects by our company makes it a key partner both from the point of view of the creation of the intellectual outputs as well as management and reporting. Galileo.it specializes in creating platforms for learning and certifying the knowledge acquired. The use of platforms based on Moodle technology allows the creation of training courses,

the evaluation of acquired knowledge and the provision of a badge that certifies the training and acquired knowledge.

The experience in the implementation of ERASMUS + projects and in creation of training for adult's education, the ability to create educational materials among the most varied (video, audio etc...) and the ability to create websites and materials for dissemination are the main skills that Galileo.it has to offer in this partnership. The teachers have a great experience in training and the technicians who will be involved have decades of experience in the creation of training materials.

We are also expert in operative research and we made a lot of very different works in collaboration with many bodies such as the Italian Federation of Hotels, the Italian Restaurant Association and so on. We collaborated for more than ten years with the Directive Staff of the "Italian Report on Tourism". We collaborated with many tertiary entities and Universities. We prepared with Createca, the Association for the development of creativity, many clips and self-learning materials.

Tito Livio Mongelli, President of Galileo.it and also of CLA and of CREATECA (NGO created by creativity guru Huber Jaoui that have the purpose of diffusing creativity tools to innovate training and also relationships between people).

He is also Italian Vice President of Skat International the biggest and oldest world tourism association and Responsible of Skat Academy. He was Italian coordinator for many European Projects such as "NOW Molise - Improve the diffusion of Ludothèques", "Dedalo Youthstart Molise", "Horizon HFORM" and also:

EQM - European Quality Mark for non-formal learning providers - (Leonardo da Vinci Project); IOLI Informal Learning for adults (Grundtvig Project);

IMPROGE - Improving Opportunities for older People in work and community activity - Winning the Generation Game (Grundtvig Project);

SME-TRAINET (Leonardo da Vinci Project); Flipped learning in Praxis (Erasmus+ Project); In Itinere. Access to work, go to work safe (Erasmus+ Project);

TECH4ALL - Investing teachers practices in using technology for Adult Language Learning (Grundtvig Project);

Right Career choice for a Happy Tomorrow (Leonardo da Vinci Project);

LISTEN - Learning Innovating Styles & Active Citizens (Grundtvig Project); Culinary Bridges Across Europe (Leonardo da Vinci Project);

ACTIVE CITIZENSHIP AND DECENT WORK.

Pierangelo Verbicaro, ICT teacher, expert in the creation of interactive didactic materials since more than 15 years.

Active participant in many European projects such as: Tech4all - Investing teachers practices in using technology for Adult Language Learning (Grundtvig Project); Active Citizenship And Decent Work (Erasmus+ Project); Healthy food choices for a sustainable future (Erasmus+ Project); Zero Waste (Erasmus+ Project); Initinere (Erasmus+ Project); High quality of adult education - European exchange of experiences (Erasmus+ Project); Self-employment for migrants and refugees with low literacy skills (Erasmus+ Project)

ROSTO SOLIDARIO - ASSOCIACAO DE DESENVOLVIMENTO SOCIAL E HUMANO (E10162508 - PT)**Partner organisation details**

Legal name	ROSTO SOLIDARIO - ASSOCIACAO DE DESENVOLVIMENTO SOCIAL E HUMANO
Country	Portugal
Region	
City	SANTA MARIA DA FEIRA
Website	www.rostosolidario.pt

Profile

Type of Organisation	Non-governmental organisation/association
Main sector of activity	Other (specify)
Please specify the main sector	Social services and life learning education

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

ROSTO SOLIDARIO (RS) aims at fostering global citizenship and solidarity by enhancing local communities' human and social development. RS core principles are civic participation, social integration, solidarity, networking and partnership. The organization scope of work includes four main areas: International Development Cooperation; Education and Global Citizenship; Volunteering; and Family-based Social Support. Gender Equity, Human Rights and Social Inclusion are addressed as cross-cutting issues in all programs implemented. Also, Rosto Solidário takes Non-Formal Education approaches to foster lifelong learning opportunities following Global Citizenship Framework.

RS legal status of public utility as NGO has been recognized by the Ministry of Foreign Affairs in 2008. RS is a member of the Portuguese NGOD Platform and it is represented in Working Group on Development Education and Global Citizenship. At the local level, RS is a member of the local network "Rede Social do concelho de Santa Maria da Feira" (host of 115 organizations with social intervention programs - following National Action Plan for Inclusion guidelines). Within this network, RS has been awarded four times with recognition of its work in fostering volunteering work and supporting local communities development. RS is a credited hosting and sending organization for European Solidarity Corps / European Voluntary Service projects since 2011.

Adding to this level the perspective of the global understanding of the world as well as bringing participants the opportunity to participate in international learning mobility experiences, particularly aligned with Erasmus + programme, RS promotes and is a partner in European voluntary service / European Solidarity Corps, partnership building activities, training courses and youth exchanges. It is also a Eurodesk multiplier.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

Education and Global Citizenship it's a core area at RS as we seek social transformation by raising critical awareness of the existing inequalities, promoting civic participation and intercultural dialogue as well as fostering solidarity and action towards common good and social change.

In the last years RS has been increasing its work with youth at the local level, adding to this level the perspective of the global understanding of the world as well as bringing participants the opportunity to participate in international learning mobility experiences. In non-formal education context, RS has experience in several innovative tools, namely in gamification, digitalization and sustainability skills, like Triple Europe Game, Stairway to SDG, Hecos for Ethics).

Catarina Gonçalves has a master in Environmental Economics and in Environmental Engineering by U. Porto with an investigation in projects of environmental and economic sustainability. She has volunteering experiences in development cooperation in Angola, EVS in Italy and citizenship education projects in Italy and Portugal, especially with women and children. She works with non-formal methodologies as a trainer of development cooperation volunteering. She also teaches environmental economics course at the U. Minho.

Paulo Costa has a degree in Economics, a master program in Development and a post-graduation in Non-profit Organization Management. He has been working in Volunteering, Development and Cooperation Programs in Angola. He coordinates projects in Portugal and gives the financial, communication and fundraising support to the board. He is responsible for the coordination of RS Erasmus+ projects, including the establishment of local partnerships, development of projects outputs and workshops development. His work as youngster's facilitator is recognized and proven and his knowledge on non-formal education allows the intervention with several target groups and contexts.

Patrícia Ribeiro has a PhD in Educational Sciences with an investigation and published articles that problematize the political, sociological, economic, and intervention discourses that define social inclusion, educational/training, and employment policies. Graduated in Psychology and Master in Adult Education and Training from the U. Porto. Postgraduate in Conflicts Mediation on Educational Context from U. Lusófona of Porto. Educational Psychologist and Mediator; certified trainer, with various trainings for teachers, youngster's and other target groups. She works mainly with non-formal and informal education methodologies, including gamification.

Iara Guimarães is graduated in Economics from ABC Federal University, has a master's in Social Intervention, Innovation and Entrepreneurship from U. Coimbra. In the last three years, she has been studying social field. She has experience as volunteer in social area, especially gender equality and kids' non-formal education in Kenya and Brazil. Recently, joined RS as a project assistant.

Susana Quintal graduated in Marketing Management and Communication and has a postgraduate degree in Digital Marketing. She gained her professional experience in the private sector, while simultaneously engaging in local and international volunteer projects and cultural association activities. She explored International Development thematic in the PG of project management in development cooperation. In the last years she has been helping to promote social entrepreneurship projects, the social economy and NGOs.

Joana Teixeira graduated in Education and has a long working experience in kindergarten with innovative methodologies. Has been in the Scout Movement since her youth, acting as a group master, a member of local/national/international working teams and a trainer of adults for many years. Also, has experience in volunteering projects in the educational field in an African country. Recently, studied Human Rights at the U. Coimbra and has joined RS as a project assistant

Would you like to make any comments or add any information to the summary of your organisation's past participation?

Rosto Solidário is partner of University of Salamanca in Erasmus KA2 Higher Education project called "Promoting Statistic And Big Data Through Gamification and Digital Education and has a relevant experience in partnerships with higher education institutions base on several partnerships founded by Erasmus+ on Youth, Adult Education, VET and Sports projects.

The 1st big experience was in Hecos for Ethics (2014 – 2017): within this project RS developed a training framework and guide focusing on 2030 Agenda and ethical skills. From that project every year Rosto Solidário – namely Paulo Costa - is responsible for some parts of the ISSSM training. The International Summer School Sustainable Management (<https://issm.be>) is organized by ODISEE (higher education organization from Belgium) and it's a ten-day intensive training (5 days on-site, 5 days online learning) that use to takes place in September. The summer school connects businesses and NGOs with students to increase their awareness for sustainable business opportunities and provide them with knowledge and skills to translate innovative ideas into viable and sustainable business initiatives. A blend of guest lectures, teamwork, field visits and social activities provides a full and varied program. The International Summer School Sustainable Management is a result of the HECOS for ETHICS project.

Involving higher education institutions Rosto Solidário are also involved in two projects in VET sector - STAIRWAY to SDG (2019 – 2022) and STAIRWAY to SDG 3.0 (2022-2024); one in Erasmus Sports - RIGHTS Respect Is the Goal, Hate speech Threatens Sport integrity (2021-2022) and in the youth sector has several experiences like "Believe in Europe: Supporting the creation of a new European citizenry among the new generations (2020-2022); The Gamification of Employment (2019-2021); The he Gamification of Employment II (2022-2024), among others.

Rosto Solidario is also involved in project in REC (Rights, Equality and Citizenship Programme) and CERV (Citizens, Equality, Rights and Values Programme) (CERV) programmes involving higher education institutions.

GAZI UNIVERSITESI (E10200512 - TR)**Partner organisation details**

Erasmus Charter for Higher Education	TR ANKARA02

Background and experience

Please briefly present the organisation (e.g. its type, scope of work, areas of activity and if applicable, approximate number of paid/unpaid staff, learners).

Gazi University, established at 1926, is continuing its claim to be one of the best higher education institution that takes its name from Gazi Mustafa Kemal Atatürk, with its 11 faculties, 5 graduate schools, and 3 vocational colleges. Gazi University has 3.500 academic staff and 3.000 non-academic staff.

Gazi University gives education in a wide range of faculties such as Education, Medicine, Dentistry, Pharmacy, Health Sciences, Science, Engineering, Architecture, Technology, Sports Sciences, and Applied Sciences. Gazi University provides education for 45.000 students from all over the country, and 2.500 foreign students from Turkic Republics, Caucasus, Europe, Middle East, Africa, America and Far East countries. The university is an international higher education institution that meets the needs of its own and other universities' teaching staff.

Gazi University, which has played an important role in the development of Turkish Republic with its academic and technological achievement, has proved its success in education both nationally and internationally. As a leading and a prestigious University with its interdisciplinary and qualified research, entrepreneurship, high-level education as well as with its community service at national and international level, Gazi University, is not only specialised in the areas of education, health or medical sciences but also in the areas of informatics and technology.

What are the activities and experience of the organisation in the areas relevant for this project? What are the skills and/or expertise of key persons involved in this project?

Gazi University can provide academic, practical and technical support in field research, pedagogy, curriculum development, development of training materials, training the trainer, student/learner assessment, and evaluation of training programs. We have experience in synchronous and asynchronous training and we can develop online/mobile learning platforms, mobile app and other IT products such as VR&AR, artificial intelligence, gamification or blockchain, etc.

Also, regarding our local, national and international connections with the industries, ministries, public bodies, VET centres, SMEs, NGOs, youth, and the community, we can establish a communication link with stakeholders, promote activities, and disseminate the results of the project through target groups. The project team is appointed below.

Alper Güzel: He is working as an Assoc. Prof. at Vocational High School of Health Services, Gazi University. He has a BA degree in Business Management and a MA in Production Management and Marketing Program at Gazi University. Also, he obtained his Phd in the field of Health Care Management. He has worked as a professional in health and hospital sector between 2001 and 2009, and since then working as an academic person at Gazi University. He has also worked as the vice director of Graduate School of Informatics between 2019-2021. His field of expertise is healthcare management&marketing, entrepreneurship, sustainability and project management. He has been supervising PhD and MSc students, and has many nationally and internationally publications. He has also published book chapter and papers about "Sustainable Development and Green Economy", "Family Business and Sustainability". He has experience in the field research, pedagogy, curriculum development, development of training materials, development of e-platforms and mobile app, student/learner assessment, and evaluation of training programs as well as project management.

Seyhan Firat: He is a full professor and has been working as academic person since 1988. He has expertise on pedagogy, environmental protection trainings, inclusion, sustainability, circular economy, physical education, youth activities, youth and sport policies. He finished his MSc in 1992 at Gazi University Science Institute. He did his PhD at Glamorgan University, Cardiff, UK and is now Professor at Gazi University. He has a certificate of strengthening VET systems in Turkey supported by EU, a certificate of development of VET system in Turkey supported by EU. Books published: People with disabilities and Employability, ISBN 9789757988656, Tutor's Note, ISBN 9789757988687, Employer's Handbook, ISBN 9789757988632, Annex, ISBN 9789757988625. He has coordinated many international projects and international conferences. Prof. Firat is experienced in project management, curricula development, training materials development, student assessment and evaluation of training programs.

Adem Tekerek: He is an Asst. Prof. of Computer Engineering at Technology Faculty. He was graduated Faculty of Technical Education at Gazi University in 2007. He completed his MSc in 2010 and completed his PhD in 2016 at Electronic and Computer Education Department at Graduate School of Informatics. He worked as Manager of Software Development at IT center between 2012 and 2016, and as Head of Information Technology Department between 2015 and 2016. Since 2020, he has been working as an Assistant Professor at Technology Faculty of Gazi University and lecturing in different universities. He has competences in web design, graphic design, software development, mobile app development, gamification, artificial intelligence, deep learning and virtual&augmented reality, blockchain etc., and participated in many national and international conferences and seminars. He is a volunteer member of some non-governmental organizations like Turkish Red Crescent and Civil Defence. He also has experience working at EU funded projects.

Relevance of the project

Priorities and Topics

All project proposals under the Erasmus+ Programme should contribute to one or more of the programme's policy priorities.

Please select the most relevant priority according to the objectives of your project.

HORIZONTAL: Environment and fight against climate change

If relevant, please select up to two additional priorities according to the objectives of your project.

HE: Stimulating innovative learning and teaching practices

HE: Supporting digital and green capabilities of the higher education sector

How does the project address the selected priorities ?

HORIZONTAL: ENVIRONMENT AND FIGHT AGAINST CLIMATE CHANGE

TIME2ACT@SD aims to contribute to the development of knowledge, skills and attitudes, as well as changing behaviours among EU HE students, in the field of sustainable development (SD) and SD Goals (SDG), through the development of interactive content, digital tools, and innovative teaching methodologies, for HE teachers' use.

Therefore, environment, climate change and sustainability will be approached with a transversal perspective, with HE students and teachers, both at the level of knowledge (MOOC and webinars) and change of attitudes and behaviours with practical activities based on a mobile app and immersive game (gamification strategies and workshops) and activities carried out in the field with real situations (bootcamps that allow demonstration through action and its transferability to real-life situations). All the contents and tools developed are available in open access to the international community of HE teachers enhancing training in the field of sustainability.

TIME2ACT@SD is also aligned with Portuguese national priorities, namely regarding climate transition and resource sustainability. The project aims to increase knowledge and change attitudes and behaviours, in HE students, so that they can contribute, now and in the future, to the efficient use of resources, valuing sustainability, improving environmental and social performance, and acting more effectively towards the climate transition.

HE: STIMULATING INNOVATIVE LEARNING AND TEACHING PRACTICES through:

- a) the development, testing and implementation of flexible learning pathways - MOOCs, webinars, and educational games;
- b) promoting the lifelong learning dimension of HE, including by facilitating the recognition of short learning courses leading to micro-credentials (ECTS for virtual workshop and bootcamp);
- c) implementation of transdisciplinary approaches and innovative pedagogies such as collaborative online international learning and research-based learning (e.g., gamification, BootCamp).

HE: REWARDING EXCELLENCE IN LEARNING, TEACHING AND SKILLS DEVELOPMENT through:

- a) developing innovative pedagogies, including trans-disciplinary approaches like MOOCs, webinars, games, workshop and bootcamps in the field of SD;
- b) fostering an open and innovative HE sector, by promoting learning and teaching partnerships with organizations in the private/social sector, integrating the team 2 companies and 1 NGO that will share their expertise and knowledge;
- c) developing new practices in teaching and skills development, based on educational research and creativity, such as the use of gamification, virtual reality, immersive learning, open and online learning, roleplaying (bootcamp);
- d) by delivering open badges to reward the accomplishment of the tasks that can be added to digital portfolios (e.g., LinkedIn).

Please select up to three topics addressed by your project

Environment and climate change

New learning and teaching methods and approaches

Development of training courses

Project description

Please describe the motivation for your project and explain why it should be funded.

The United Nations 2030 Agenda has defined 17 SDG that should be implemented at all levels (international, national, regional, local). The Education for SD (ESD) has a major role in the achievement of the 17 SDG. In 2019, UNESCO proposed a framework for the implementation of ESD beyond 2019 (ESD for 2030 Framework). It "focuses on strengthening ESD's contribution to the achievement of all 17 SDGs, focusing on policies, learning environments, teachers and educators, youth as well as communities" (United Nations,2019:1). The TIME2ACT@SD aims to act at the learning environments supporting teachers and students of HE in the development of knowledge, skills and attitudes in the field of SD and SDG.

Attention should be given to sustainability in all Higher Education Institutions (HEIs) regardless of the students' training area and curricula. The 17 SDG cover the key environmental challenges (e.g., climate change, water, ocean and land), and the fundamental issues that need to be taken into consideration in development discourses, such as poverty, gender equality and equity. However, recent studies show that a significant part of HE students does not know much about SDG or have no idea of what it means and how they can contribute to SD (Aleixo et al,2021; García-González et al,2020).

Considering that (a) today's students will be leaders and decision-makers in the future, (b) changing minds and behaviours towards SD should be encouraged and reinforced during their studies, and (c) shaping their attitudes and values is only possible in the long run, HEIs have a critical role in this process.

TIME2ACT@SD seeks to produce a set of open educational resources and promote a set of initiatives to address the lack of knowledge and skills and change attitudes and actions towards SD among young people attending HE. Through innovative practices of training and education (MOOC and gamification strategies) and through active methodologies (workshops and bootcamps, as activities of experimental nature), the project aims to promote literacy in the target group in the field of SD/SDG, as well as behavioural changes regarding individual preferences, awareness of SD, consumption habits and lifestyles. The project outcomes will be developed to increase the 3 levels of acquisition of sustainability competencies (Cebrián et al,2019): knowledge (conceptual learning), know-how (practical skills) and do (linked to the demonstration in action and its transferability to real-life situations).

TIME2ACT@SD will impact HEI stakeholders:

- a) making educational resources in the field of SD/SDG available tofor teachers, reinforcing the set of resources available to develop innovative teaching-learning processes;
- b) strengthening the knowledge and skills of HE students in SD topic, contributing to a better tuning between their attitudes and behaviours;
- c) promoting the use of innovative SD/SDG teaching tools transversally at all HE teaching levels.

What are the objectives you would like to achieve and concrete results you would like to produce? How are these objectives linked to the priorities you have selected ?

TIME2ACT@SD aims to contribute to the development of knowledge, skills, and attitudes, as well as changing behaviours among UE HE students, in the field of SD and SDG, through the development of interactive content, digital tools, and innovative teaching methodologies, for HE teachers' use.

To achieve this overall objective, a set of specific objectives (O) and expected results (ER) have been defined (see the attached project framework):

O1: To identify knowledge and skills' gaps under the topic of SD/ and SDG, embracing both HE students and teachers, to provide inputs for the development of innovative resources for the HE teaching-learning process.

The O1 ER: 2 articles submitted in international journals and a Research Report about SD knowledge and skills' gaps.

O2: To develop innovative tools and interactive content, based on the use of gamification concepts, for formal and non-formal education of HE students, in the field of SD and /SDG, through a transdisciplinary and student-centered approach, that can be used by HE teachers, in all curricula, for HE students at all levels.

The O2 ER: (a) MOOCs related with environmental, social and economic sustainability; (b) Webinars related with environmental, social and economic sustainability; (c) Web/mobile-based (APP) games; (d) Immersive game.

O3: To develop innovative methodologies, based on the use of the gamification that will integrate skills and knowledge about SD and SDG, to empower HE teachers and encourage HE students learning by doing.

The O3 ER: (a) Virtual workshop for HE teachers; (b) Bootcamps for HE teachers and students; (c) Scientific paper about innovative methodologies.

O4: To promote the organisational enhancement of 7 institutions and strengthen the cooperation partnership between them through the development, dissemination, and exploitation of innovative tools and methodologies created in the field SD/SDG for HE.

The O4 ER: (a) Online platform; (b) Record of stakeholders' meeting conclusions; (c) International conference; (d) Oral communications at international conferences; (e) Transnational project meetings.

All objectives are linked to the horizontal priority "Environment and fight against climate change", as they lead to the development of innovative tools, for use of HE teachers boosting students training with the knowledge and skills to change their attitudes and behaviours facing SD, environment and climate change. O1 and O3 are linked to priority "Rewarding excellence in learning, teaching and skills development" through the diagnosis of needs on SD topics, fostering the design of a customized program that will improve the skills of students and teachers in SD, and delivering open badges, added to digital portfolios. O2 and O4 are aligned with "Stimulating innovative learning and teaching practices" promoting the lifelong learning dimension of HE, the transdisciplinary approaches and innovative pedagogies such as collaborative learning and research-based learning.

What makes your proposal innovative?

TIME2ACT@SD is innovative because it will:

- a) stimulates innovative learning and teaching practices through the implementation of active methodologies and by developing open educational resources as complementary learning materials, based on the usage of gamification and virtual reality (VR) technologies, in the topics of sustainability and SDG, which can be used transversally and at various educational levels;
- b) support and promote digital competencies amongst HE students and HE teachers since we will develop open-access digital resources (such as MOOC, webinars, videos, online platform) and it will facilitate online training events;
- c) grant a certification based not only in ECTS, but also by providing open badges (information-rich visual records of verifiable achievements earned by recipients and easily shared on the web and via social media);
- d) promote bootcamps that bring sustainability to real-life events.

How is this project complementary to other initiatives already carried out by the participating organisations?

IPSantarém and Thomas More are partners in the project "Hanging Out! - Outdoor education to enhance the quality of early childhood education and care and to promote active citizenship". In TIME2ACT@SD we also keep pursuing the change of mentalities in the field of environmental sustainability and environmental education and green skills but with an impact in HE students and teachers. IPSantarém has recently developed the national project "Volto Já" which promoted the social sustainability of social economy organisations.

Galileo has already wide experience concerning participation in initiatives and projects related with SDG, such as: "Self-employment for migrants and refugees with low literacy skills" - aims to provide migrants and refugees with basic knowledge of the language of their host country and low literacy skills; "Healthy food choices for a sustainable future" - focused about healthy food choices, climate change and vegetable enhanced diet (this project is listed at Erasmus+ as a good practice example); "Active Citizenship and Decent Work" - aim to develop active learning methodologies, pedagogical approaches and training materials designed to improve social and civic competencies.

Rosto Solidário has relevant experience in partnerships with HE institutions and projects founded by Erasmus+ on Youth, Adult Education, VET and Sports projects. They have already participated in projects like: "Promoting Statistics and Big Data Through Gamification and Digital Education"; Hecos for Ethics, RS developed a training framework and guide focusing on 2030 Agenda and ethical skills; The Gamification of Employment I and II.

Although the aim of these projects differs, they have a common ground related to the consciousness of SD. TIME2ACT@SD will be an opportunity to re(use) the good practices developed and implemented by the previously mentioned projects adapting them and applying them to the context of HE students and teachers.

How is your proposal suitable for creating synergies between different fields of education, training, youth and sport or how does it have a strong potential impact on one or more of those fields?

During the TIME2ACT@SD project, different competencies come together to create synergies, regarding innovative technologies and teaching/learning methodologies and produce the set of resources that will reinforce the impact expected by the implementation of the project.

HE students are mostly made up of the young population. This makes the potential impact of the project-oriented to youth, but not only. Lifelong learning politics brings also to the HE community some older age population. Different perspectives of life will boost the impact of the project in society through the exchange of knowledge and experiences between teachers, older and younger students. The dissemination activities will be open to the outer population (e.g., activities that do not have any pre-requirements).

Education for sustainable development and the change of attitudes and behaviours requires a transversal approach at all educational levels, contexts and addressed to various audiences. For that, we believe that is possible to use the same

resources using different strategies according to the student's profile, which will be reinforced throughout the student's life. Some of the learning activities developed are outdoor and could be used by sports practisers or other youth associations since could develop competencies like team building, leadership, and communication.

How does the proposal bring added value at European level through results that would not be attained by activities carried out in a single country?

TIME2ACT@SD aims to drive the adoption of attitudes and behaviours of EU HE students aligned with the SD/SDG. Although convergence facing the 17 SDG represents a global challenge, national characteristics, policy priorities and the focus level on environmental action and mechanisms to support SDG progress in Europe are diverse. The context analysis with a transnational lens reveals a great challenge because of the different geographical needs and political priorities in different countries, but also raises an excellent opportunity to develop innovative approaches to the design of experiences envisaged in this project. Significant benefits are expected by the sharing of good practices in each partner profile.

Benefits of cooperating with transnational partners:

- a) Strengthen the collaboration among HEIs and to install a culture of cooperation and co-creation between partners and stakeholders, deepening on the context of each country;
- b) Strengthen research and teaching capacities by enriching the core knowledge and skills on creating and developing a collaborative approach at EU level and learning from peers, capitalising on their actual background of knowledge and delivering high quality outputs;
- c) Co-publishing with researchers from other countries improve skills of conducting research with impact for different HEIs;
- d) Provide training of teaching staff, benefiting from HEIs experiences and resources;
- e) Provide partners with tools to cope with UN 2030 Agenda objectives;
- f) Learn about the context in other countries and be encouraged to collaborate with diverse cultures and backgrounds, providing intercultural competences that are essential in Europe's multi-cultural society;
- g) Promote relationships with a long-term time horizon, a commensurate commitment of resources, regular evaluation, and deliberate efforts to introduce new activities and expand collaboration;
- h) Transformational relationships would be the cornerstone of the community created.

Needs analysis

What needs do you want to address by implementing your project?

The UN 2030 Agenda has defined 17 SDG that should be implemented at all levels. Recent studies show that part of HE students does not know about the SDG or have a vague idea of what it means and how they can contribute to SD (e.g., Aleixo et al., 2021; Dagiliute et al., 2018; Lambrechts et al., 2018; García-González et al., 2020).

The embedding of sustainability education in the curriculum of the study programs is still often lacking, which means that SD is not sufficiently deepened among students. Education for SD is, however, socially relevant. Sustainability challenges dominate the international political agenda and are an opportunity to (re)create agile organizations. For that, and for challenges raised on the impact of megatrends like the climate changes, refugee flows, the economic challenges, became crucial for young graduates to actively deal with these complex issues, preferably with a proactive sense. Education is essential to create a sustainable mindset among current and future generations. Training courses can be a catalyst for this. UNESCO already recognized the importance of this training and invite every country to integrate environmental education in their formal curricula until 2025.

The Y and Z generations could make a difference in this playground because once they are motivated, they make things happen. We all remember the worldwide impact of Greta Thunberg movement, at the time a high school student. Due to the pandemic crises, some of the pillars that supported society as we know it, shattered. In the worst possible way, social inequalities and challenges for the next decade emerged. Although, in a general way, people are more predisposed to accept the paradigm shift; introducing sustainability training into teaching can increase their motivation.

Therefore, we must motivate and empower this target group using what science has already proved, that young people can reach higher levels of knowledge more easily if they are set objectives. This methodology will be enhanced, using technology and educational games, which is a tool that cannot be ignored when we seek to work with young people.

Considering that today's students will be the leaders and decision-makers of the future and that changing minds and behaviours towards SD should be encouraged and reinforced while they are still studying and shaping their attitudes and values, HE institutions have a role to play in this process.

Then, the main need that we want to address in this project is the lack of knowledge, skills, attitudes, and actions towards SD among young people attending HE.

On the other hand, most HE teachers face difficulties in developing and integrating sustainability and environmental issues within the courses they teach (e.g., Busquets et al, 2021). Then, a second need that we want to address is the lack of innovative educational tools to bridge this gap in students' education.

What are the target groups of the project?

Time2Act@SD has 2 main target groups: HE teachers and HE students.

Higher education teachers: HE teachers from the participant's institutions and others HEIs, from all the levels and field of studies.

Higher education students: HE students from the participant's institutions and others HEIs, from all the levels (e. g., students from professional HE courses, bachelor and master) and all fields of studies. Special attention will be given to the participation of students with fewer opportunities in the training actions to be developed. Students with fewer opportunities will include working students, students with children, students with economic difficulties, students with special educational needs, and students coming from rural areas.

Other target groups, that will benefit from the project, although indirectly, are other HE institutions, the scientific community, policymakers, local authorities, the national agencies, and community in general, in local, regional, national and European contexts.

How did you identify the needs of your partnership and those of your target groups?

As mentioned before, the UN 2030 agenda has defined 17 SDG that should be implemented at all levels. European HE institutions play a key role in this process. Four entities of the partnership are HE institutions. We held meetings with all partners where identification of needs and how the partnership could address them took place. Through the projects already executed together, we identified the need to develop innovative teaching-learning tools, namely using gamification strategies, to mainstream sustainability and environmental issues, in a transversal way (in different scientific areas and HE levels), in formal and non-formal education, to HE students. Additionally, the 2 companies of the private sector have extensive experience in the development of innovative educational tools, that they can share within the partnership. Complementarily, the NGO has experience in developing content on the topic of sustainability.

The needs of the target groups were identified in 3 ways:

- (a) through literature review in the field of education, sustainability education, environment, and climate change in international journals such as "International Journal of Sustainability in Higher Education", "Journal of Education for Sustainable Development", "Sustainability", "International Journal of Educational Technology in Higher Education", and "Journal of Technical Education and Training";
- (b) exploratory interviews and informal focus groups, conducted ad-hoc, with some HE students and teachers;
- (c) the accumulated experience of the teachers who are part of this partnership, namely those who are coordinators of bachelors and master's degrees in the partner institutions.

How will this project address these needs?

To address the need related to HE teachers' difficulties in introducing the teaching of sustainability and SDG in formal and non-formal education, the project proposes to develop appealing contents, tools, and innovative approaches for teaching SD, which can be used both in the context of formal and non-formal education (in all scientific areas and levels of education). As demonstrated in previous studies, students who have used electronic educational resources are most often satisfied with the learning environment (Solobutina & Kalatskaya, 2018) and perform better than those who do not have that experience (Wang & Zhu, 2019).

The resources will be made available on the project's online platform, as well as on other European platforms (e.g., NAU, School Education Gateway), in open access, so that HE teachers can use them, both while the project is being implemented and after its completion. We will also develop training and skills development actions (virtual workshop and bootcamps) for teachers to adopt innovative technology-based approaches, empowering participating teachers to use the new tools with HE students.

To address the lack of knowledge, skills, attitudes, and actions towards SD among young people attending HE, and the lack of innovative educational tools to bridge this gap in students' education, the TIME2ACT@SD project seeks to produce a set of open educational resources and the promotion of initiatives to meet these needs. Through innovative practices of training and education (MOOC, webinars, gamification strategies which help motivate for learning, and activities of a more experimental nature such as bootcamps) and through active methodologies, the project aims to promote the literacy of this target group in the field of SD/SDG, as well as behavioural changes regarding individual preferences, awareness of SD, consumption habits and lifestyles. These innovative practical short learning courses are meant to lead to micro-credentials to students.

Partnership and cooperation arrangements

Partnership composition

Organisation ID	Legal name	Country	City	Organisation type	Newcomer
E10165803	INSTITUTO POLITECNICO DE SANTAREM	Portugal	SANTAREM	Higher education institution (tertiary level)	No
E10133131	UCLAN CYPRUS LIMITED	Cyprus	LARNAKA	Higher education institution (tertiary level)	No

E10204796	Galileo.it S.r.l.	Italy	Rome	School/Institute/Educational centre – Adult education	Yes
E10162508	ROSTO SOLIDARIO - ASSOCIACAO DE DESENVOLVIMENTO SOCIAL E HUMANO	Portugal	SANTA MARIA DA FEIRA	Non-governmental organisation/association	No
E10200512	GAZI UNIVERSITESI	Turkey	ANKARA	Higher education institution (tertiary level)	No

Cooperation arrangements

How did you form your partnership? How does the mix of participating organisations complement each other and what will be the added value of their collaboration in the framework of the project? If applicable, please list and describe the associated partners involved in the project.

The primary motivation of TIME2ACT@SD came from the perceived need to share experiences and expertise on the topic of SD/SDG. Partners chose voluntarily to take part in this endeavour due to their past experiences in developing projects and their long-time partnership. For instance, IPSantarém and Thomas More are partners in an Erasmus+ project in the field of outdoor education for young children and ECEC.

IPSantarém and Learnmera and Galileo are long-time partners, from the old times of the GRUNDTVIG Learning Partnerships, and have substantial experience in the field of the development of teaching/training/learning resources. IPSantarém has a strong role regionally but also internationally involved in several networks with impact and contribution to the SDG, especially with the countries from PALOP, partnerships and projects concerning their development in terms of digital literacy, online education solutions, design and development of teaching materials.

Thomas More also has a tradition in the sustainability field and has gained experience through past initiatives and projects. School projects on sustainable parental involvement, social challenges like diversity, topics on city gardening, walking, exploring the city through children's eyes and more recently, in cooperation with the architectural design department of Thomas More and Samenlevingsopbouw, the development of a play-bike for teachers and social workers to reach and inform (Thomas More) parents with young children living in risk of poverty and social exclusion about school participation and playing as learning.

UCLan Cyprus has established strong partnerships with businesses, community, non-profit organisations, and other parties to enable dynamic knowledge sharing, build synergies, and promote innovative and empowering learning practices. Furthermore, UCLan Cyprus is a Member of Sustainable Development Solutions Network (SDSN). SDSN mobilizes global scientific and technological expertise to promote practical solutions for SD. Galileo has been participating in several international-funded projects in the field of SD.

Learnmera is a private adult education provider in the field of business language with many migrants/ex-pats student, to whom often grant help with their needs outside the classroom (e.g., work, housing, cultural issues). His experience with multicultural agents is an important contribution.

Rosto Solidário is a NGO, recognized by the Ministry of Foreign Affairs in 2008, and is a member of the Portuguese NGOD Platform and it is represented in Working Group on Development Education and Global Citizenship. It complements the partnership with the knowledge about social sustainability.

Gazi University has long tradition on projects in the fields of learn/teaching process, and the assessment of the results of this process.

The importance of maintaining some past partnerships to strengthen the network, exchange good practices and generate synergies to a vaster community

What is the task allocation and how does it reflect the commitment and active contribution of all participating organisations (including the associated partners, if applicable) ?

The work of the project is organized in 3 groups: management, technical and scientific (see the attached project framework). IPSantarém, as coordinator of the project, will take the responsibility for the overall lead of the project management in close collaboration with all partners.

IPSantarém leads the WP1. WP 1 is dedicated to the project management effort, where all partners have a role, including tasks that assure the adequate management of the project towards success. Technical and scientific work is divided in 4 other WP. The technical and scientific tasks will be developed by the members of the partnership in a collaborative way: each activity will have a leader, but most partners collaborate in all activities.

The WP2 concentrates the scientific work under the responsibility of IPSantarém and Thomas More. Transnational studies will be made, 1 involving HE students (lead by IPSantarém) and 1 with teachers (lead by Thomas More), to identify knowledge and skills gaps under the topic of SD/SDG, resulting in 2 scientific papers and a research report (lead by IPSantarém).

The WP3 aims to produce open online educational resources (based on the deliverables of WP2) to be used later in the activities of the workshops and bootcamps. MOOCs will be delivered by Galileo (on environmental sustainability), Thomas More (on social sustainability) and Gazi University (on economic sustainability). The 3 webinars will be led by Galileo. The educational games will be developed by Learnmera and UCLan Cyprus. Rosto Solidário will directly contribute to the content development of all the activities of this WP. All the remaining partners will collaborate by sharing their experience, as

well as translating the materials from English to native languages.

WP4 includes the organisation and delivery of 1 virtual workshop, 2 bootcamps/LTT, and a 3rd scientific paper. The virtual workshop will be led by Learnmera, with co-organization of UCLan Chyprus. The bootcamps will be led by UCLan Cyprus and Thomas More and all partners will participate (the HEIs with teachers and students). The 3rd study will be led by UCLan Cyprus and all the remaining HEIs partners will do data collection.

WP5 will be carried out by all partners, although most activities are being led by IPSantarém. The online platform will be under the responsibility of IPSantarém, which will ensure the technical construction, but all partners will contribute with content for it. Gazi University will lead the focus groups to be held with the HEIs' stakeholders, and all the remaining HEIs will hold focus groups in their HEIs. The international conference (ME) will be led by IPSantarém, but all partners will be participating in it. All HEIs will present the project results in international conferences. IPSantarém, Thomas More and UCLan Chyprus will ensure the publication of the articles in scientific journals.

Describe the mechanism for coordination and communication between the participating organisations (including the associated partners, if applicable)

The effective cooperation and communication among participants will be organised in several ways. Particularly, communication between partners will be operationalized through periodical meetings, using ICT tools (videoconference meetings). The coordinator will be responsible for the communication and will hold periodical virtual meetings with each local coordinator to discuss the progress of the project and the participants' work, as well as to evaluate the project's activities and results. The partners will be asked to share in a collaborative platform (e.g., Asana integrated into Microsoft Teams) the progress of activities monthly. Online contact between each partner's local coordinator and the project coordinator will ensure the effectiveness of cooperation and communication. Therefore, between the partner institutions exists a strategic cooperation focused in sharing good practices and know-how and discussing pedagogical material developed and results of its work. The communication to all relevant stakeholders will be done by every partner using their own communication media, including asynchronous and synchronous communication (email, skype, Zoom, newsletters), and through the organisation of events or educational practices. Also, the partners must share information and produce collaborative documents, using digital tools (such as MS Teams and Asana).

Seven transnational project meetings (4 on-site; 3 online) of the project consortium will be organised during the project to explore practices and to plan future activities, including 1 in the beginning and 1 at the end. Also, online partners' meetings (e.g., with all the local coordinators) will be organised to prepare and promote learning activities, organize activities, and monitor the progress of the project.

The project's online platform will also be used for further dissemination of the project's results, outputs and outcomes, making it available for a wider audience across Europe (and worldwide). This online platform will include links to the local partners' websites, the site of the Erasmus program, the Erasmus Results Platform. With respect to the educational materials, these shall become available under a Creative Commons Licence, thus effectively establishing Open Educational Resources.

Articles about different tasks and events will be published in partners' newsletters for dissemination of the project. The official language used to communicate is English (UK), but the written results will be translated into 5 different idioms (Portuguese, Greek, Turkish, Italian, Dutch).

Project design and implementation

Work package n°1 'Project Management'

How will the progress, quality and achievement of project activities be monitored? Please give information about the involved staff, as well as the timing and frequency of the monitoring activities.

The project will be managed using an Agile approach, based on sprints of 1 month long. At the IPSantarém team, there is a project management specialist, who will be directly responsible for this WP, besides the project coordinator. In the partners, there are also project management managers.

After the kick-off meeting, the product backlog will be defined, and the sprints may start. Estimated effort and duration are adjusted to the context and a risk identification and assessment will be done. The Risk Registry will be updated, and the overall risk exposition will be identified. The necessary risk response plan will be set according to the severity of the risk. This is a management task where the project manager/leader must be actively involved with the team leader of the partner(s) involved in that sprint.

The operational responsibility of each activity is already assigned to a partner, and inside of this group, there will be a leader, with the role of participating in the detailed planning procedures and then, on the monitoring and controlling, and reporting the progress to the product owner, and project leader.

The progress of the Activities inside each WP is measured through the assessment of the completion of the products of each sprint.

The quality control of the deliverables will be assured, towards the project implementation, involving 1 staff of each partner, with a manager profile, and that may not be directly involved in the work of the related task. This will allow an outside perspective (with no bias) over the work going on and the timely identification of problems. This procedure is expected to contribute to assure an adequate quality monitor and control level and the high quality of the final deliverables, and so, the achievement of the aimed impacts. Quality concerns are due much earlier than the beginning of the work. The main metrics are set in each work package (WP) and the targets to be achieved with each activity in it.

A version control process will be implemented.

Everyone in the team is deeply committed in contributing to a consistent procedure that evaluates all activities inside each WP and the related deliverables, along the project. The usage of templates to specify the requirements of each product, grants the existence of an adequate level of documentation. The decomposition of the technical work will play a critical success factor, so the deliverables produced can be evaluated as soon as the work is completed in a specific and measurable way.

Since the project will produce outputs with distinct characteristics, the steps used to manage, internally by the team, the work, may be specific. This detail is always considered and set at the beginning of each activity.

How will you ensure proper budget control and time management in your project?

The success of TIME2ACT@SD, in terms of these fundamental axes (cost and time), will be pursued by the active commitment of all partners, and centralized in the IPSantarém (as Coordinator), assuming a major coordination role. During the project TIME2ACT@SD, the proper management of cost and time will be performed in 2 specific moments: (1) planning, and (2) monitoring and control while implementing.

At the kick-off meeting, the main principles of managing the project will be reviewed. These aspects include the management structure and the identification of the team members of each organization. There will be also the confirmation of the overall activities and responsibilities of each, the most relevant moments and milestones, templates and guidance for the internal reporting and preparation of the interim and final reports.

The financial aspects will have accurate processing, based on supporting documents and assuring an effective control of the project budget execution. Some templates, available for monitoring the expenses, will be used, allowing a better check of the financial resources. All these templates will be produced by IPSantarém before the project kick-off meeting, as a proposal, and will be presented to the partners and adapted if needed, before being approved by all.

TIME2ACT@SD activities are structured in such a way as to facilitate the monitoring of whether the project is complying with what is expected, in terms of time. The workplan (based on the timetable with the planned activities; see attached Gantt chart) will be shared amongst all partners, allowing everyone to be aware of the stage/evolution of each WP/activity/sprint from each partner. The coordinator will update the status of each activity (based on the information provided by the responsible, and using colours: green, yellow, and red), ticking the completed tasks, keep the track to those in development and prepare those starting soon, preventing the delay. Besides the transnational project meetings (TPM), the coordinator will prepare and lead online meetings in between the TPM ones, to have a clear and broad idea of how the project is running

and the status of each sprint/activity. The TPM and in-between meetings (online) are also a way to maintain the whole partners updated and to strengthen the group cohesion, helping also to prevent risks. Each partner will hold the responsibility to maintain the contact and the effective connection with the local stakeholders. The project coordinator will maintain the overall coordination of the project and will scrutinize each activity to ensure it is delivered on time and according to the budget.

A collaborative tool (e.g., Asana integrated into Microsoft Teams) will be used to keep all members informed about the responsibilities and the status of each WP.

What are your plans for handling risks for project implementation (e.g. delays, budget, conflicts, etc.)?

Risk Management is one of the topics considered at the start of TIME2ACT@SD. The process of identify, classify, plan the responses and act in face of a problem is considered a way to prevent running into serious trouble, with severe impact on success of the project. Some of the risks were identified during the preparation of this application, but a more detailed risk identification process will be made at the kick-off meeting. During this discussion, risks will be identified, a list of project risks will be completed, and a detailed contingency plan will be drawn, according to severity of the risk identified. To properly monitor the probability of occurrence of each risk, and to maintain an acceptable level of exposition to risk, this contingency plan will consider adequate actions to prevent dangerous events, and to mitigate its impacts. The following are just an example of the risks already identified and evaluated:

a) data collected is not enough to do the study; b) change in key staff; c) delay in a specific activity or finalization of a deliverable; d) training modules content are not adequate; e) the emergence of a new pandemic and/or political crisis (war) conditioning the holding of on-site training sessions and conferences.

To avoid delays, the process of identification of the activities in each WP, will be very carefully conducted and the same for the estimation of the necessary effort to complete it. Each task length will consider the adequate time to complete the work and to review it. Dependencies will be identified and set in the timeline. During the execution, the close collaboration between coordinator and the partners will allow tracking of all the tasks evolution/development.

Concerning the conflicts, online meetings with the partners, will happen often, to maintain and strengthen the group cohesion, giving some time to discuss ideas and difficulties. As for the budget control, the support of the Financial Offices of each partner will be crucial

How will you ensure that the activities are designed in an accessible and inclusive way?

There are multiple dimensions when considering accessibility and inclusiveness. First, the project team is multinational, multicultural, comprising members of different gender, cultures, religions and ages.

Then, when preparing each activity, no barriers will be set to limit the participation of any kind of person. The activities will be adapted, if it is feasible, so all the participants can take the most out of the prepared experience.

Additionally, the criteria used to select the students attending the events directed to the community will consider positive discrimination to privilege students with fewer opportunities (e.g., students from low-income backgrounds, working students, students who have children, students from rural areas, students with special educational needs).

We will actively seek to involve HE students with fewer opportunities in training activities.

Additionally, all resources and materials will be produced in English to ensure easy access to all teachers and students in higher education, both within and outside Europe.

Most of the dissemination resources will be translated into 5 languages, besides English (which is the main language of the project). These 6 different idioms are: English, Portuguese, Greek, Turkish, Dutch, and Italian).

How does the project incorporate the use of digital tools and learning methods to complement the physical activities and to improve cooperation between partner organisations?

During the TIME2ACT@SD project, to assure centralized management of the work and its progress, a set of collaborative tools will be adopted, as they fit the needs of the team members: tools like Asana, MS Teams, MS Onedrive, and professional Zoom to support collaboration between team members, and other sets of tools, from Microsoft, to promote personal productivity. An international project, where team members are geographically separated and spread over long distances, implies the use of collaborative digital tools.

All the results of the project will be presented in digital format. No paper will be used during the project. All the documents produced will be developed using digital tools and should be distributed among the team via electronic channels and published and or archived on digital platforms. The usage of MS Teams platform, which was in use by the team to produce this application, has been a practice for some time. A great part of the team has considerable experience using this kind of tools.

Previously, the cooperation with partner organisations was based on the exchange of email messages and Zoom meetings, and we hope to be able to share information and processes, in the context of the project, and even beyond, using innovative ways. This project will allow the establishment of new channels to cooperate.

During the project, the set of digital tools used to produce the deliverables expected, which are in digital format, are aligned with the objectives of the project. At least those related to the awareness about the environment and the unnecessary waste of natural resources.

How does the project incorporate green practices in different project phases?

In the context of TIME2ACT@SD, there is a concern to balance environment-friendly practices with Face-to-Face (F2F) practices (which will contribute to increasing the cohesion of the team and enhance moments of exchange of experiences and strengthening of the partnership). The project TIME2ACT@SD was designed to minimize the number of physical meetings. But, on the other hand, it is necessary to make F2F events where the team members may meet each other and promote cohesion inside the group. The first international meeting, kick-off, must be on-site, so the leaders of each team may meet, get to know the venues where some of the activities will run and make the final arrangements F2F before the project execution starts. All the management meetings will be local, between national teams, and remote, between team leaders and the project manager. So, most of the meetings will happen remotely, with no need for travelling.

Online meetings are also planned for the implementation of the project activities (3 online transnational project meetings are planned in addition to the periodic virtual meetings that will take place for project management and development activities). As for the activities, webinars and workshops are planned to be held exclusively online to ensure the broad participation of HE teachers and students from various countries, following a more environmentally friendly and cost-efficient approach.

Most of the products produced by the project are digital, with no (or low) carbon footprint. The contents and tools developed, and even the main project management documentation will be digital and available online (no paper will be used), and also in open access allowing the international community of HE teachers to (re)use it to contribute to the training of students in the field of sustainability.

The studies will use online digital platforms to collect and process data. No paper will be used in the data collection (surveys) or data analysis.

Since there are 2 partners from the same country (PT), the travelling between the venues of each of these partners will be made using a green alternative.

Grant amount allocated to the work package n° 1 'Project Management' (whole number with no decimals).

48 960,00 €

Other work packages

Please note that it is recommended to split your projects in a maximum of 5 work packages, including the one on project management.

In this section, please do not add the work package project management already included in the previous section.

Work package id	Title	Number of activities	Grant (EUR)
2	Transnational studies with HE students and teachers	3	10 689,00
3	Development of interactive content and digital/innovative tools	8	64 267,00
4	SD/SDG training Workshops and Bootcamps	4	65 189,00
5	Strengthening the cooperation partnership & dissemination and exploitation of the project's results	12	60 895,00
Total			201 040,00

Work package n°2 - Transnational studies with HE students and teachers

What are the specific objectives of this work package and how do they contribute to the general objectives of the project?

The specific objectives of WP2 are:

O1.1: To carry out a diagnosis, embracing HE students, with a view to identifying knowledge and skills' gaps under the topic of sustainability and SDG;

O1.2: To carry out a diagnosis, embracing HE teachers, with a view to identifying teaching-learning process' gaps under the topic of sustainability and SDG;

O1.3: To elaborate the report with the identification of the gaps for the teaching-learning process in HE on the topic of sustainability and SDG.

Contribution to the general objective no. 1:

Identifying HE students' knowledge and skills' gaps under the topic of sustainability and SDG (O1.1.) will provide inputs for the development of innovative resources for the HE teaching-learning process. Additionally, identifying the teaching-learning process' gaps under the topic of sustainability and SDG according to the perceptions of HE teachers (O1.2) will also provide inputs for the development of innovative resources for the HE teaching-learning process. The achievement of O1.1 and O1.2 will allow the development of a portfolio with a list of gaps for teaching sustainability/SDG in higher education, which will guide the contents to be addressed in the following WP tasks (O1.3).

What will be the main results of this work package?

The main results of WP2 are:

R2.1: Scientific paper with the HE students' perceptions about knowledge and skills' gaps under the topic of sustainability and SDG, submitted in international peer-reviewed journal.

R2.2: Scientific paper with the HE teachers' perceptions about teaching-learning process' gaps under the topic of sustainability and SDG, submitted in international peer-reviewed journal.

R2.3: Research report about SD/SDG knowledge and skills' gaps.

What qualitative and quantitative indicators will you use to measure the level of the achievement of the work package objectives and the quality of the results?

Quantitative Indicators and quality of results (QR):

I2.1: Number of participants in the student's study (QR: at least 500 HE students from different countries)

I2.2: Number of participants in the teacher's study (QR: at least 100 HE teachers from different countries)

I2.3: Number of scientific papers submitted in international peer-reviewed journals (QR: 2 articles)

I2.4: Number of reports (QR: 1 report)

Qualitative and quality of results (QR):

I2.5: Diversity of students and teachers involved in the studies (QR: HE students and teachers by the levels of education considered (e.g., 1st and 2nd cycle) and by the geographical diversity of the participants in the study (at least from 4 different countries)).

I2.6: Indexing of the journals where the papers are submitted (QR: at least 1 journal indexed in WoS or Scopus).

Please describe the tasks and responsibilities of each partner organisation in the work package.

Activity 2.1 (Develop a transnational study with HE students) is responsibility of IPSantarém:

- 3 teachers from IPSantarém will conceptually define the paper, its objectives, carry out a literature review listing the studies already conducted in the area, develop a draft of the questionnaire, plan and execute the data analysis, and present results and conclusions;

- All partners will collaborate in the data collection process and translate the documents produced to their own native language.

Activity 2.2 (Develop a transnational study with HE teachers) is responsibility of Thomas More:

- 3 teachers from Thomas More will conceptually define the paper, its objectives, carry out a literature review listing the studies already conducted in the area, develop a draft of the questionnaire, plan and execute the data analysis, and present results and conclusions;

- All partners will collaborate in the data collection process and will translate the documents to their own native language.

Activity 2.3 (Research report about SD/SDG knowledge and skills gaps) is responsibility of IPSantarém.

A teacher from Learnmera will do the English proofreading of all documents produced in all activities (questionnaire, papers and report)

Please explain how the grant amount attributed to this work package constitutes a cost-effective use of the budget

The budget for WP2 is 10.689€.

In WP2, the funds were entirely allocated to staff costs, corresponding to a total of 62 working days (WD), broken down as

follows:

- 1) 25 WD for IPSantarém teachers to develop 2 scientific studies, as well as to carry out the technical report with the identification of gaps in the sustainability teaching-learning process (3.425€);
- 2) 20 WD for Thomas More teachers to develop 2 scientific studies (4.280€);
- 3) 9 WD for Learnmera to collaborate in the data collection for the study as well as doing the English proofreading (1.926€);
- 4) 8 WD for the remaining partners (2 WD/partner) to collaborate on the data collection of the 2 studies (1.058€).

Because the real number of working days for WP2 is expected to be higher than estimated, the project budget will be complemented with other funds (own funds of the institutions). Therefore, the expected overall cost of the project shall be higher than the fixed lump sum amount requested.

Activities - (2 - Transnational studies with HE students and teachers)

In the following sections, you are asked to provide details about each activity of the work package.

You are asked to provide information about each planned activity as a whole (e.g. its venue, duration, etc.), to define the activity's lead organisation, and optionally to list the other participating organisations. The lead organisation is typically the one organising the activity. The other participating organisations are all other project partners who will also take part in the particular activity. The estimated activity start and end dates can be changed during implementation.

Please specify each of the planned project activities in the table below

Activity title	Venue	Estimated start date:	Estimated end date:	Leading Organisation	Participating Organisations	Amount allocated to activity (whole number) (EUR)	Expected results
Develop a transnational study with HE students	Virtual activity	01/02/2023	31/07/2023	INSTITUTO POLITECNICO DE SANTAREM (E10165803 - PT)	UCLAN CYPRUS LIMITED (E10133131 - CY)	4 617,00	Scientific paper no 1
					THOMAS MORE MECHELEN-ANTWERPEN (E10181600 - BE)		
					Learnmera Oy (E10176763 - FI)		
					Galileo.it S.r.l. (E10204796 - IT)		
					ROSTO SOLIDARIO - ASSOCIACAO DE DESENVOLVIMENTO SOCIAL E HUMANO (E10162508 - PT)

Research Report about SD/SDG knowledge and skills' gaps	Virtual activity	01/06/2023	31/07/2023	INSTITUTO POLITECNICO DE SANTAREM (E10165803 - PT)	685,00	Research Report
					10 689,00	

Description of the activities

Describe the content of the proposed activities.

Activity 2.1: Develop a transnational study with HE students

- a) Carry out a literature review on Education for SD (ESD), with a special focus on HE students;
- b) Identify international studies in the area of HE students' perceptions regarding SD and SDGs;
- c) Develop and implement a survey among HE students and perform data analysis;
- d) Profile HE students regarding their knowledge, skills and attitudes towards SD and SDG, and identify gaps in these areas;

Data will be collected from a sample of HE students from Portugal, Belgium, Turkey, Cyprus, Finland and Italy.

Activity 2.2: Develop a transnational study with HE teachers

- a) Carry out a literature review on ESD, with a special focus on HE teachers;
- b) Identify international studies in the area of HE teachers' perceptions regarding SD and SDGs and their integration in learning process;
- c) Develop and implement a survey among HE teachers and perform data analysis;
- d) Define the preferences of HE teachers regarding the type of formal and non-formal training in the field of SD and SDG, as well as their motivation for it.
- e) Identify gaps in the teaching-learning process' under the topic of sustainability and SDG.

Data will be collected from a sample of HE teachers from Portugal, Belgium, Turkey, Cyprus, Finland and Italy.

Activity 2.3: Research Report about SD/SDG knowledge and skills' gaps

- a) Through the studies carried out with HE students (in activity 2.1) create a list of knowledge and skills' gaps under the topic of SD and SDG.
- b) Through the studies carried out with HE teachers (in activity 2.2) create a list of teaching-learning process' gaps under the topic of SD and SDG.

Explain how this activity is going to help reach the WP objectives.

Activities 2.1 and 2.2 will provide relevant (primary) data to characterize the profile of HE students in terms of acquired knowledge in SD and SDG, as well as the hiatus in these themes. Also, the perspective of HE teachers in terms of coverage by actual course programs about SD and SDG, their perception of alternative ways to include those contents as well as their motivation to adapt those courses will be investigated. These studies will also allow to identify differences between countries. Both activities allow the achievement of WP2 objectives O1.1 and O1.2.

Activity 2.3 makes it possible to achieve objective O1.3. The report with the identification of the gaps for the teaching learning process in HE on the topic of SD and SDG will give inputs for WP3 and WP4.

Describe the expected results of the activities.

The expected results of the activities are:

R2.1 Scientific paper no 1 (with HE students' perceptions about sustainability and SDG)

R2.2 Scientific paper no 2 (with HE teachers' perceptions about sustainability and SDG)

R2.3 Research report

Transnational studies (Activities 2.1 and 2.2) will provide the collection of important data and inputs. The scientific papers (Results R2.1 and R2.2) intend to communicate the diagnostic of gaps and the main conclusions, for both HE students and HE teachers.

Result R2.3 (Research report) intends to present a critical analysis of some selected results looking into the links between knowledge, skills, attitudes, and behaviours of HE students on sustainability and SDG (and the identifications of gaps), as well as gaps on the teaching-learning process under the topic of sustainability and SDG following the HE teachers' perceptions.

Expected number and profile of participants.

We expect to embrace in both transnational studies:

- a) at least 500 HE students from different countries;
- b) at least 100 HE teachers from different countries.

Please keep in mind that the Erasmus+ Programme is offering co-financing for your project. This means that the EU grant can only cover a part of the project costs, while the rest must be covered by the participating organisations either in form of additional funding, or in form of invested goods, services and work.

Work package n°3 - Development of interactive content and digital/innovative tools

What are the specific objectives of this work package and how do they contribute to the general objectives of the project?

The specific objectives of WP3 are:

- O2.1: To develop MOOCs aiming at the enhancement and development of HE students' literacy in the field of SD and SDG.
- O2.2: To organize and streamline webinars aiming the enhancement and development of HE students' literacy in the field of SD and SDG.
- O2.3: To develop web/mobile-based (APP) and immersive game applied to SD and SDG.

Contribution to the general objective no.2: MOOCs, webinars, interactive educational games (web/mobile-based (APP) and immersive game) to be developed can be used for formal and non-formal education of HE students, in the field of SD and SDG, through a transdisciplinary and student-centered approach, that can be used by HE teachers, in all curricula for HE students and at all levels.

The lack of knowledge, skills, attitudes and actions towards SD and SDG of HE students must be fulfilled with a transdisciplinary and student-centered approach in the different scientific domains and levels of HE. In order to do it effectively it is essential to use innovative tools and interactive content, based on the use of gamification, appealing to this public motivation and enhancing learning. Delivering open badges to certify and reward the accomplishment of the tasks that can be added to digital portfolios could be motivational for the target group.

What will be the main results of this work package?

The main results of WP3:

- R 3.1, R 3.2, R 3.3: MOOCs with contents related to environmental, social, and economic sustainability and SDG;
- R 3.4, R 3.5, R 3.6: Webinars related to environmental, social, and economic sustainability and SDG;
- R 3.7, R 3.8: Educational games (web/mobile base game – app; immersive game) about sustainability and SDG.

What qualitative and quantitative indicators will you use to measure the level of the achievement of the work package objectives and the quality of the results?

Quantitative Indicators and quality of results (QR)

- I3.1: Number of MOOCs with different contents in sustainability/SDG (QR: 3 MOOC, 1 for each SD domain - environment, social and economic)
- I3.2: Number of webinars in the field of sustainability/SDG (QR: 3 webinars, 1 for each SD domain - environment, social and economic)
- I3.3: Number of short videos in the field of sustainability/SDG (QR: at least 9)
- I3.4: Number of students who completed MOOC activities (QR: at least 60 for each MOOC)
- I3.5: Number of students and teachers who participated in the webinars (QR: at least 60 for each webinar)
- I3.6: Number of students and teachers who tested the web/mobile-based (app) SD/SDG game (QR: at least 25)
- I3.7: Number of students and teachers who tested the immersive SD/SDG game (QR: at least 25)
- I3.8: Number of students and teachers awarded with open badges upon the completion of the course (QR: at least 60)

Qualitative Indicators and QR:

- I3.9: Satisfaction level of students and teachers related with the participation in MOOC, webinars and games (QR: at least 60% of satisfaction)

Please describe the tasks and responsibilities of each partner organisation in the work package.

Act 3.1 (MOOC Env.) is responsibility of Galileo. 2 teachers from Galileo will lead activity 3.1 and the underlying tasks, with the collaboration of 7 teachers/staff (1 Thomas More, 1 UCLan Cyprus, 1 IPSantarém, 1 Learnmera, 2 Rosto Solidário and 1 Gazy University).

Act 3.2 (MOOC Social) is the responsibility of Tomas More. 3 teachers from Tomas More will lead activity 3.2 and the underlying tasks, with the collaboration of 7 teachers/staff (1 Galileo, 1 UCLan Cyprus, 1 IPSantarém, 1 Learnmera, 2 Rosto Solidário and 1 Gazy University).

Act 3.3 (MOOC Eco) is the responsibility of Gazy University. 2 teachers from Gazy University will lead activity 3.3 and the underlying tasks, with the collaboration of 7 teachers/staff (1 Thomas More, 1 UCLan Cyprus, 1 IPSantarém, 1 Galileo, 1 Learnmera and 2 Rosto Solidário).

Act 3.4 (Webinar Env.): 2 teachers from Galileo will be responsible for this activity, supported by 1 staff from all other partners.

Act 3.5 (Webinar Social): 2 teachers from Galileo will be responsible for this activity, supported by 1 staff from all other partners.

Act 3.6 (Webinar Eco): 2 teachers from Galileo will be responsible for this activity, supported by 1 staff from all other partners.

Act 3.7 (Web/mobile based SDG Game) is responsibility of Learnmera, 1 technician and 2 teachers will contribute to the deliverable. UCLan Cyprus will be in line with the immersive VR. 1 teacher from IPSantarém, Thomas More, Galileo and 2 from Rosto Solidário will contribute to general features.

Act 3.8 (Immersive SDG Game) UCLan Cyprus is responsible and lead the development of the VR game. Learnmera will implement educational materials. UCLan Cyprus will engage 3 researchers with expertise in educational VR environments, gamification and educational technologies. 7 teachers/staff (1 IPSantarém, 1 Thomas More, 1 Galileo, 1 University of Gazy and 2 Rosto Solidário) will participate in the identification of educational requirements as well as in the evaluation studies.

Please explain how the grant amount attributed to this work package constitutes a cost-effective use of the budget

The budget for WP3 is 64.267€, allocated to: (a) staff working days (WD) – 41.267€; (b) equipment acquisition – 23.000€.

The funds allocated to staff costs, corresponding to a total of 257,5 WD, were broken down as follows:

- a) 11 WD for IPSantarém to contribute to the contents of the 3 MOOCs; disseminate, participate and involve students and teachers for the 3 webinars; collaborate in the testing of the educational games (expected cost: 1.507€);
- b) 53 WD for UCLan Cyprus to develop the immersive games, as well as to collaborate in the development of the contents of the 3 MOOCs and their translation into the Greek language; to disseminate, participate and involve students and teachers for the 3 webinars; to collaborate in the testing of all educational games (7.261€);
- c) 25 WD for Thomas More to develop the MOOC for social sustainability, as well as collaborate on the content development of the remaining 2 MOOCs and their translation into Dutch; disseminate, participate and involve students and teachers for the 3 webinars; collaborate on the testing of all educational games (5.350€);
- d) 58 WD for Learnmera who will develop the web/mobile-based educational games, as well as the English proofreading of the 3 MOOCs and the English materials of the webinars; and also coordinate with UCLan Cyprus the development of the educational games (12.412€);
- e) 35,5 WD for Galileo to develop the MOOC for environmental sustainability, as well as to collaborate in the content development of the remaining 2 MOOCs and their translation to Italian; to organize and streamline the webinars, as well as to produce the videos for future integration in the MOOCs; to collaborate in the testing of the educational games (7.597€);
- f) 53 WD by Rosto Solidário to contribute with contents of the 3 dimensions of sustainability for the MOOCs, webinars and educational games; translate the materials from English to Portuguese; collaborate in the testing of the educational games (5.512€);
- g) 22 WD for Gazi University to develop the MOOC for economic sustainability, as well as collaborate in the development of the contents of the remaining 2 MOOCs and translation of the same into Turkish; disseminate, participate and involve students and teachers for the 3 webinars; collaborate in the testing of all educational games (1.628€).

The real number of working days for WP3 is expected to be higher than estimated, so the project budget will be complemented with other funds (institutions own funds).

Although the partner institutions already have equipment that will be allocated to the project (e.g., multimedia laboratories, professional Zoom, Microsoft Teams) the need to purchase ICT equipment has been identified, namely: personal computers for teachers/researchers; equipment to be used with immersive games (Smartphone-Based Head-Mounted Display Devices), will be needed to use by students, both during LTT/bootcamps and afterward; professional software licenses for collaborative work (e.g., Asana).

The budget for the acquisition of ICT equipment (hardware and software) was allocated to partners as follows: 6.000€ to IPSantarém; 4.000€ to UCLan Cyprus; 4.000€ to Thomas More; 2.500€ to Galileo; 2.500€ to Rosto Solidário; and 4.000€ to Gazi University.

Activities - (3 - Development of interactive content and digital/innovative tools)

In the following sections, you are asked to provide details about each activity of the work package.

You are asked to provide information about each planned activity as a whole (e.g. its venue, duration, etc.), to define the activity's lead organisation, and optionally to list the other participating organisations. The lead organisation is typically the one organising the activity. The other participating organisations are all other project partners who will also take part in the particular activity. The estimated activity start and end dates can be changed during implementation.

Please specify each of the planned project activities in the table below

Activity title	Venue	Estimated start date:	Estimated end date:	Leading Organisation	Participating Organisations	Amount allocated to activity (whole number) (EUR)	Expected results
Develop MOOC aiming the enlargement of HE students' literacy on the Environmental Sustainability	Virtual activity	01/09/2023	29/12/2023	Galileo.it S.r.l. Description of the activities

Describe the content of the proposed activities.

Activity 3.1: Develop MOOC aiming to promote the HE students' literacy on Environmental Sustainability.

Activity 3.2: Develop MOOC aiming to promote the HE students' literacy on Social Sustainability.

Activity 3.3: Develop MOOC aiming to promote the HE students' literacy on Economic Sustainability.

Each MOOC will be developed in an articulated mode, following the same design structure. To develop activities 3.1, 3.2 and 3.3 we will: summarize research results and collected data from WP2; define the content of the modules; design the modules and collect useful documents; design the online framework of the course.

Activity 3.4: Organize and streamline webinar aiming at the enhancement of HE students' literacy on Environmental Sustainability.

Activity 3.5: Organize and streamline webinar aiming at the enhancement of HE students' literacy on Social Sustainability.

Activity 3.6: Organize and streamline webinar aiming at the enhancement of HE students' literacy on Economic Sustainability.

The Webinars will be developed in an articulated mode, following the same design structure. To develop activities 3.4, 3.5 and 3.6 we will: plan of the webinar (goals, date, time, guest speakers, moderators, structure, form, interactive tools, recording, feedback); preparatory work with guest speakers; pre-webinar interaction through social media.

Activity 3.7: Develop web/mobile-based (APP) SDG Games. 1) System Requirements Identification; 2) Game Environment Design and Implementation;

Activity 3.8: Develop Immersive SDG Game. 1) System Requirements Identification: gather and understand learning materials; identify educational requirements; identification of relevant gamification and game-based learning approaches; identify technical requirements. 2) VR Game Environment Design and Implementation: game conceptual planning; virtual environment design; design game-based learning activities, game functionalities implementation; 3) VR Game Pilot Evaluation.

Explain how this activity is going to help reach the WP objectives.

Each activity will contribute to the achievement of the WP objectives as follows:

Activities 3.1, 3.2 and 3.3 have as results 3 MOOC on environmental, social, and economic sustainability. These activities reach O2.1. contributing to the enlargement of HE students' literacy in the field of SD and SDGs.

Activities 3.4, 3.5 and 3.6 will produce 3 webinars that address environmental, social, and economic sustainability, which may contribute to the enlargement of HE students' literacy in the field of SD and SDG. The webinars will allow recording videos, which will be available for teachers to use in their classes (virtual or face-to-face), namely, to promote flipped classes, as well as for student self-training through integration with MOOC. These activities reach O2.2.

Activities 3.7 and 3.8 will produce educational games that contribute to the training of students in sustainability/SDG, using innovative (web/mobile-based - APP) and immersive technologies such as AR/VR, which are available to HE teachers for student training reaching O2.3.

Describe the expected results of the activities.

The expected results of the activities are:

R3.1 MOOC – Environmental Sustainability;

R3.2 MOOC – Social Sustainability;

R3.3 MOOC – Economic Sustainability;

R3.4 WEBINAR – Environmental Sustainability;

R3.5 WEBINAR – Social Sustainability;

R3.6 WEBINAR – Economic Sustainability;

R3.7 Web/mobile-based (APP) SDG Games;

R3.8 Immersive SDG Game.

Results R3.1, R3.2 and R3.3 are MOOC on environmental, social, and economic sustainability/SDG. R3.4, R3.5 and R3.6 are webinars on environmental, social, and economic sustainability/SDG. The MOOC will be available worldwide and it will be easily translated into other languages and adapted to the different contexts (open access content). The Webinar, open and online, allow to reach a larger number of people and involve experts outside the HEI partners. The MOOCs and webinars will have an impact on the remaining activities and results of the project, as they will contribute to reaching the "knowledge" level of sustainable competencies. The MOOC and webinars will be shared not only in the project's platform but also in national and European platforms (e.g., NAU, School Education Gateway). Through the webinars, short videos will be recorded which can be used as educational resources. The language of all resources is English, but subtitles (in other languages) may be used to make the contents available to a wider range of audience.

The results R3.7 and R3.8 are educational games on sustainability/SDG. There are 2 kinds of games: a) web/mobile-based version of the interactive SDG Game, that students and teachers can access via a digital device (computer, tablet,

smartphone) and solve some challenges in line with SDG, promoting a learning competition environment; b) interactive SDG Game, in the form of an immersive game-based learning application, where students can access and experience in Virtual Reality (VR) through VR enabled smartphone devices and using cardboard-based Head-Mounted displays. The language of games is English

Expected number and profile of participants.

Profile of participants on MOOCs: Students from HEIs – at least 60 students completed each MOOC (180 on total).

Profile of participants on webinars: Students and Teachers from HEIs – at least 60 by webinar (180 on total).

Profile of participants on the Web/mobile-based (APP) and SDG Game the immersive SD/SDG game pilot evaluation: Students and Teachers from HEIs – at least 50.

Please keep in mind that the Erasmus+ Programme is offering co-financing for your project. This means that the EU grant can only cover a part of the project costs, while the rest must be covered by the participating organisations either in form of additional funding, or in form of invested goods, services and work.

Work package n°4 - SD/SDG training Workshops and Bootcamps

What are the specific objectives of this work package and how do they contribute to the general objectives of the project?

The specific objectives of WP4 are:

O3.1: To design and develop a workshop to empower HE teachers on educational games for SD and SDG

O3.2: To design and develop sustainability bootcamps to empower HE teachers and encourage HE students learning by doing

Contribution to the general objective no. 3:

An important contribution of the project is to fill the gaps in the teaching-learning process for HE students towards SD/SDG focusing the learning process on innovative methodologies such as the use of educational games. For that purpose, we plan a virtual workshop (O3.1) that will provide teachers with competencies to perform those innovative methodologies, based on the use of gamification in formal and non-formal environments. Learning by doing environments can be enhanced by participation in sustainability bootcamps (on-site LTT – learning, teaching and training activity) (O3.2). It is expected that this experience will also be instrumental to provide teachers' empowerment.

What will be the main results of this work package?

R4.1: Virtual workshop for HE teachers;

R4.2: Sustainability Bootcamps for HE teachers and students (on-site LTT for teachers and students);

R4.3: Scientific paper on innovative methodologies, based on the use of gamification for promoting sustainability/SDG.

What qualitative and quantitative indicators will you use to measure the level of the achievement of the work package objectives and the quality of the results?

Quantitative Indicators and quality of results (QR):

I4.1: Number of courses developed with the attribution of micro-credentials (QR: 1 workshop (1 ECTS); 1 Bootcamp (2 ECTS))

I4.2: Number of workshops held, with the participation of HE teachers (QR: 1 workshop)

I4.3: Number of bootcamps held, with the participation of HE teachers and students (QR: 2 bootcamps)

I4.4: Number of teachers participating in virtual workshops (QR: 40 teachers)

I4.5: Number of teachers and students participating in bootcamps (QR: 80 participants)

I4.6: Percentage of students with fewer opportunities (e.g., students from low-income backgrounds, working students, students who have children, students from rural areas, students with special educational needs, women) enrolled in the bootcamp activities: (QR: at least 40% of the total of students)

I4.7: Number of scientific papers submitted in international peer-reviewed journals (QR: 1 scientific paper)

Qualitative and quality of results (QR):

I4.8: Diversity of teachers involved in the workshop (QR: HE teachers by the levels of education considered (e.g., 1st and 2nd cycle) and by the geographical diversity of the participants (at least from 3 different countries)).

I4.9: Diversity of students and teachers involved in the bootcamp (QR: HE students and teachers by the levels of education considered (e.g., 1st and 2nd cycle) and by the geographical diversity of the participants in the study (at least from 3 different countries)).

I4.10: Satisfaction of participants in virtual workshops and bootcamps (QR: at least 60% of satisfaction)

I4.11: Satisfaction of participants with educational games (QR: at least 60% of satisfaction)

I4.12: Assessment of the bootcamp experience (LTT) impact on attitudes and behaviours (QR: at least 30% changed at least 1 attitude/behaviour)

I4.13: Indexing of the journal for article submission (QR: WoS or Scopus).

Please describe the tasks and responsibilities of each partner organisation in the work package.

Activity 4.1: Design and development of a workshop on educational games for sustainability

- This activity will be led by Learnmera;

- UCLan Cyprus will collaborate with Learnmera in the preparation of the workshop for teachers;

- IPSantarem, UCLan Cyprus, Thomas More, Galileo and Gazi University must promote the workshop, participate and invite other HE teachers to participate.

Activity 4.2: Design and development of the sustainability Bootcamp 1

- This activity will be led by UCLan Cyprus;

- UCLan Cyprus will organise the LTT/bootcamp 1 (that will occur in Cyprus) with the collaboration of IPSantarem, Thomas More, Rostó Solidário, Galileo and Gazi University;

- Learnmera will test the games with students;

- Learnmera will support the final revision of the text (English proofreading).

Activity 4.3: Design and development of the sustainability Bootcamp 2

- This activity will be led by Thomas More University;

- Thomas More University will organise the LTT/bootcamp 2 (that will occur in Belgium) with the collaboration of

IPSantarem, Rosto Solidário, UCLan Cyprus, Galileo and Gazi University;
- Learnmera will test the games with the students;
- Learnmera will support the final revision of the text (English proofreading).

Activity 4.4: Develop a study about innovative methodologies, based on the use of gamification for promoting sustainability/SDG

- This activity will be led by the UCLan Cyprus;
- Teachers from IPSantarém, Thomas More and Gazi University will collaborate in data collection;
- Learnmera will support the final revision of the text (English proofreading).

Please explain how the grant amount attributed to this work package constitutes a cost-effective use of the budget

The budget for WP4 is 65.190€, allocated to: (a) funds related to staff costs – 11.259€; (b) travel and subsistence expenses of teachers and students participating in LTT – 42.731€; (c) subcontracting of services – 8.000€; and (d) acquisition of other services – 3.200€.

The funds allocated to staff costs, corresponding to a total of 70,5 working days (WD), were broken down as follows:

- a) 4,5 WD for IPSantarém to collaborate in the virtual workshop for teachers; in the planning of the bootcamps (LTT); in the data collection for the scientific study on innovative methodologies; and in the translation of the LTT materials into Portuguese (617€)
- b) 36 WD for UCLan Cyprus to organize the bootcamp/LTT in Cyprus, carry out the scientific study on innovative methodologies; collaborate in the virtual workshop and in the organization of the Belgium bootcamp; translate LTT materials into Greek (4.932€)
- c) 13,5 WD for Thomas More to organise the bootcamp/LTT in Belgium, collect data for the scientific study on innovative methodologies; collaborate in the virtual workshop and in the organisation of the Cyprus bootcamp; translate LTT materials into Dutch (2.889€)
- d) 8 WD for Learnmera to organise the virtual workshop on educational games; collaborate on the use of games during the bootcamps and revise the English of the scientific paper (1.712€);
- e) 3 WD for Galileo to collaborate in the different activities of WP4 (642€);
- f) 2 WD for Rosto Solidário to collaborate in the different activities of WP4 (208€);
- g) 3,5 WD for Gazi University to collaborate in the different activities of WP4 (259€).

The real number of working days for WP4 is expected to be higher than estimated, so the project budget will be complemented with other funds (own funds of the institutions). Therefore, the expected overall cost of the project shall be higher than the fixed lump sum amount requested.

Participation in LTT's (5 days of activities and 2 days of travel per LTT):

- a) IPSantarém: 2 HE teachers and 5 HE students in each LTT (Belgium and Cyprus);) – 12.663€;
- b) UCLan Cyprus: 2 HE teachers and 5 HE students in the LTT (Belgium) – 6.034€;
- c) Thomas More: 2 HE teachers and 5 HE students in the LTT (Cyprus) – 6.034€;
- d) Gazi University: 2 HE teachers and 5 HE students in each LTT (Belgium and Cyprus) – 11.473€;
- e) Learnmera: 1 teacher in each LTT (Belgium and Cyprus) – 2.119€;
- f) Galileo: 1 teacher in each LTT (Belgium and Cyprus) – 2.119€;
- g) Rosto Solidário: 1 technician in each LTT (Belgium and Cyprus) – 2.289€.

Local HE teachers and students will participate in the Belgium and Cyprus LTT/Bootcamps without travel and subsistence expenses.

Logistical services for the bootcamps/LTT are estimated to be subcontracted, with an expected real cost of 10.000€ (8.000€ included in the lump sum; the remaining part (20%) will be supported by the respective HEIs). This subcontracting of services includes:

- a) Bootcamp in Cyprus, including the hiring of space for the realization of outdoor activities and transport between the academic campus and the location (or locations) where the activities will take place. Logistics services for 40 participants, 5 days of LTT (expected real cost of 5.000€; included in lump sum 4.000€).
- b) Bootcamp in Belgium, including the hiring of space for the realization of outdoor activities and transport between the academic campus and the location (or locations) where the activities will take place. Logistics services for 40 participants, 5 days of LTT (expected real cost of 5.000€; included in lump sum 4.000€).

The purchase of other services includes travel insurance for students participating in international mobilities and LTT for each HEI (expected total cost 3.200€):

- a) IPSantarém – 800€;
- b) UCLan Cyprus – 800€;
- c) Thomas More – 800€;
- d) Gazi University – 800€

Activities - (4 - SD/SDG training Workshops and Bootcamps)

In the following sections, you are asked to provide details about each activity of the work package.

You are asked to provide information about each planned activity as a whole (e.g. its venue, duration, etc.), to define the activity's lead organisation, and optionally to list the other participating organisations. The lead organisation is typically the one organising the activity. The other participating organisations are all other project partners who will also take part in the particular activity. The estimated activity start and end dates can be changed during implementation.

Please specify each of the planned project activities in the table below

Activity title	Venue	Estimated start date:	Estimated end date:	Leading Organisation	Participating Organisations	Amount allocated to activity (whole number) (EUR)	Expected results

Description of the activities

Describe the content of the proposed activities.

Activity 4.1: Design and development of a virtual workshop on educational games for sustainability

Development of 1 virtual workshop for teacher training in innovative, digital, interactive and immersive tools (e.g., educational games) in teaching sustainability/SDG.

The workshop teaching resources will be available in open access, both on the project's online platform and on EU platforms, allowing teachers across Europe and around the world to use the materials to replicate the workshops in their classes and training.

For this activity it is also important the establishment of micro-credentials, corresponding to 1 ECTS.

Activities 4.2 and 4.3: Design and development of the sustainability Bootcamp 1 and 2.

Both bootcamps have the same design and are on-site LTT.

These bootcamps will represent intensive experiences that will put in practice active methodologies in learning by doing environment, to test and validate the tools and methodologies previously created.

Integrated into these activities is a 5-day bootcamp, with practical activities to be carried out in the field (including games).

For this activity it is also important the establishment of micro-credentials, corresponding to 2 ECTS.

Activity 4.4: Develop a study about innovative methodologies, based on the use of gamification for promoting sustainability/SDG.

The scientific paper aims to share the TIME2ACT@SD main result with the international community, hoping to raise awareness for the need to increase HE students' perceptions regarding SD and SDGs and the contribution of the project to face those needs.

Explain how this activity is going to help reach the WP objectives.

Each activity will contribute to the achievement of the WP objectives as follows:

- Activity 4.1 (Design and development of a workshop on educational games for sustainability) contributes to reaching WP4 objective O3.1.

- Activities 4.2 and 4.3 (Bootcamps/LTT) will support WP4 objective O3.2. Activities 4.2 and 4.3 strengthen the level of acquisition of skills in sustainability for the "do" skills, which is achieved through the transferability of knowledge and know-how skills to real-life situations. This activity also aims to assess the impact that training can have on the acquisition of knowledge and skills as well as changing students' attitudes and behaviours.

- Activity 4.4 (Develop a study about innovative methodologies, based on the use of the gamification for promoting sustainability/SDG) allow the achievement of WP4 objectives O3.1 and O3.2. The scientific paper aims to share the TIME2ACT@SD main results with the international community, hoping to raise awareness for the need to increase HE students' perceptions regarding SD and SDG and the contribution of the project to face those needs. This study will also allow to the identification of possible differences between countries.

Describe the expected results of the activities.

The expected results are:

R4.1: Virtual workshop for HE teachers

The virtual workshop involves practical activities to provide HE teachers with skills to use the educational games in their classes.

R4.2: Bootcamps for HE teachers and students (LTT)

To change attitudes and behaviours by taking students out of their comfort zone, confronting them with real-life situations, either from their home country or from the country they visit on mobility. Students will be challenged to rethink current practices and behaviours with a view to adopt new attitudes/behaviours better aligned with sustainability challenges. HE students will be challenged to use the developed educational games (web/mobile-based and VR games) during the bootcamp. A practical and field-developed approach is needed to promote this change and make the SDG a reality in the short and medium-term.

R4.3: Scientific paper intend to communicate the diagnostic of innovative methodologies, based on the use of gamification for promoting sustainability/SDG.

The study will be published in an international journal and presented at scientific conferences, thus presenting a high potential for knowledge transfer to the international scientific community. We expect this dissemination to inspire the development of similar projects in other institutions/regions/countries

Expected number and profile of participants.

We expect:

- a) 40 participants (HE teachers) in the virtual workshop, from different countries.
- b) 80 participants in bootcamps (LTT – learning, teaching and training activities), from different countries (HE teachers, HE students and partners staff). In each bootcamp (LTT) will participate 16 participants from the host country and 24 from partners. More specifically:
 - (i) in the Bootcamp organised by UCLan Cyprus will participate 4 teachers from the organising HEI, 9 teachers and/or staff from the partner organisations from other countries, 12 higher education students from the organising HEI, 15 students from the partner HEIs from other countries;
 - (ii) in the Bootcamp organised by Thomas More (Belgium) will participate 4 teachers from the organising HEI, 9 teachers and/or staff from the partner organisations from other countries, 12 higher education students from the organising HEI, 15 students from the partner HEIs from other countries.

Where possible, HE students with fewer opportunities will be involved in the activities as well as students from different educational levels (e.g., bachelor's and master's degrees).

Please keep in mind that the Erasmus+ Programme is offering co-financing for your project. This means that the EU grant can only cover a part of the project costs, while the rest must be covered by the participating organisations either in form of additional funding, or in form of invested goods, services and work.

Work package n°5 - Strengthening the cooperation partnership & dissemination and exploitation of the project's results

What are the specific objectives of this work package and how do they contribute to the general objectives of the project?

WP5 contributes to the achievement of the general objective no. 4. The specific objectives of WP5 are:

O4.1: to hold transnational project meetings, where knowledge and experience sharing, as well as the collaborative development of new tools and innovative content, takes place between the members of the partnership;

O4.2: to widely disseminate and exploit the results of the project through an online platform, where innovative tools and interactive content are available in open access, as well as on Erasmus+ platforms;

O4.3: organise focus groups with other HEI stakeholders, namely HEI leaders and decision-makers such as course coordinators, to motivate the integration of the tools and approaches developed, in all curricula for HE students in all disciplines and at all levels;

O4.4: to promote discussion, knowledge and exchange of experiences in the area of Education for SD and SDG through a multiplier event;

O4.5: widely disseminate the project results either by participating in national and international conferences or by publishing scientific papers;

The strengthening of the cooperation partnership will occur through the work to be developed in a collaborative way, which will be planned, integrated and evaluated in transnational project meetings (O4.1). The project results will be widely disseminated on the project's online platform and, where applicable, on the Erasmus+ platforms (O4.2). The involvement of other stakeholders from the HEIs will allow exploiting the project results beyond the project implementation deadline, reinforcing the cooperation partnership (O4.3). The partnership will also be reinforced through a multiplier event, with the participation of all partners and several elements of the target audience (HE teachers and students) (O4.4). The results of the project will be widely disseminated and exploited through presentations at scientific conferences, as well as with papers in international scientific journals (O4.5).

What will be the main results of this work package?

The WP5 has the following results:

- a) Transnational project meetings;
- b) Online platform;
- c) Record of stakeholders' focus-groups conclusions;
- d) International conference as multiplier event;
- e) Oral communications and posters at international conferences;
- f) Scientific papers published in international scientific journals.

What qualitative and quantitative indicators will you use to measure the level of the achievement of the work package objectives and the quality of the results?

Quantitative indicators and quality of the results (QR):

I5.1 Number of participants in the transnational project meetings (QR: Project coordinator and at least 1 representative of each partner);

I5.2 No. of meeting reports (QR: 7; 1 per international meeting);

I5.3 No. of people visiting the project platform until the deadline of the project (QR: 500 visits);

I5.4 No. European platforms where the project materials are available (QR: 2 - NAU and School Education Gateway);

I5.5 No. of participants in the stakeholders meeting, namely HEI leaders and decision-makers such as course coordinators (QR: HE teachers (20), HE leaders, course coordinators or other decision-makers (15), other stakeholders (5));

I5.6 No. of oral communications or posters at international conferences on project outputs (QR: at least 10);

I5.7 No. of virtual participants in the international conference (multiplier event) (QR: 30);

I5.8 No. of on-site participants in the international conference (multiplier event) (QR: 65 local and 5 foreign);

I5.9 No. of participants with fewer opportunities (e.g., students from low-income backgrounds, working students, students who have children, students from rural areas, students with special educational needs) enrolled in the international conference (QR: 10);

I5.10 No. of scientific papers published in international peer-reviewed journals (QR: 3).

Qualitative indicators:

I5.11 Satisfaction level of participants in the multiplier event (QR: at least 60% of satisfaction).

Please describe the tasks and responsibilities of each partner organisation in the work package.

Activity 5.1: Develop an online Platform, like a Content Management System (CMS) to disclose project information, and, if necessary, hosting the server side of apps and games (responsibility: IPSantarém; with the collaboration of all partners to produce content to publish).

Activity 5.2: Organise focus groups with other HEI stakeholders, to present the results of the project and to capture, into a report, their awareness about the importance of the insertion of SD and SDG in the curricula of HE courses (responsibility:

Gazi with the collaboration of all HEI partners).

Activity 5.3: Organise and streamline an international conference, to disseminate and promote the debate about the main topics of the project and others related (responsibility: IPSantarém; with the collaboration of all partners to organise).

Activity 5.4: Present the project's results on international conference, to disclose the results of the studies (responsibility: IPSantarém; with the collaboration of HEI partners).

Activity 5.5: Publish the project's scientific articles, to make the knowledge produced by the project reach wider range of the scientific community (responsibility: IPSantarém).

Activity 5.6: Transnational project meetings, to strengthen the cooperation partnership and to prepare and flashback the work of the project (responsibility: each partner has a leader role on each of the 7 scheduled meeting). This activity comprises 4 on-site transnational meetings (IPSantarem for kick-off meeting and for closeup of the project, 1 meeting in Italy and another in Cyprus) and 3 virtual transnational meetings (Rosto Solidário, Cyprus and Belgium).

Please explain how the grant amount attributed to this work package constitutes a cost-effective use of the budget

The budget of WP5 is 60.895€, allocated to: (a) staff costs' working days (WD) – 10.987€; (b) travel expenses for transnational project meetings – 31.260€; (c) multiplier event – 8.950€; (d) subcontracting of services – 1.000€; and (d) acquisition of other services – 8.698€.

The funds allocated to staff costs, corresponding to a total of 74,5 WD were broken down as follows:

- a) 40 WD for IPSantarém to develop the online platform (and translate it to Portuguese); to organize the international conference (multiplier event); to promote focus groups with Portuguese HEIs stakeholders; to publish the articles in scientific journals and to present the project results in international conferences (5.480€);
- b) 8 WD for UCLan Cyprus to collaborate in the integration of contents in the platform (including translation to Greek); to promote focus group with stakeholders from Cyprus HEIs; and to prepare the presentation of the project results in international conferences (1.096€);
- c) 4 WDs for Thomas More to provide content for the platform (including translation into Dutch); to run focus groups with Dutch HEIs stakeholders; and to prepare the presentation of the project results at international conferences (856€);
- d) 6 WD for Learnmera to collaborate in the integration of contents in the platform, including the English proofreading of the project and international conference platforms (1.284€);
- e) 6 WD for Galileo to collaborate in the integration of contents in the platform (including Italian translation) and in the organization of the international conference (1.284€);
- f) 7 WD for Rosto Solidario to provide information to update the platform and collaborate in the organization of the international conference (728€);
- g) 3,5 WD for Gazi University to provide content for the platform (including Turkish translation); to run focus groups with Turkish HEI stakeholders; and to prepare the presentation of the project results in international conferences (259€).

The real number of working days for WP5 is expected to be higher than estimated, so the project budget will be complemented with other funds (the own funds of the institutions).

Travel expenses for participating in transnational project meetings were broken down as follows:

- a) Trips for IPSantarém teachers to participate in the TPM that takes place in Italy and Cyprus (the project coordinator and 2 teachers in each TPM) – 4.005€;
- b) Trips for UCLan Cyprus teachers to participate in the TPM that takes place in Italy and Portugal (2 teachers in each of the 3 TPM) – 4.560€;
- c) Travel for Thomas More teachers to participate in the TPM that takes place in Italy, Cyprus and Portugal (2 teachers in each of the 4 TPM) – 4.600€;
- d) Trips for Learnmera staff to attend TPM in Italy, Cyprus and Portugal (2 staff in each of the 4 TPM) – 6.080€;
- e) Trips for Galileo staff to participate in workshops in Cyprus and Portugal (2 staff in each of the 3 TPM) – 3.820€;
- f) Trips for Rosto Solidário staff to participate in the MPRs in Italy, Cyprus and Portugal (1 staff in each of the 4 TPM) – 2.485€;
- g) Trips for Gazi University teachers to participate in the TPM that takes place in Italy, Cyprus and Portugal (2 teachers in each of the 4 TPM) – 5.710€.

The budget of the international conference (multiplier event) includes grants for:

- a) 65 local participants – 6.500€;
- b) 5 foreign participants – 1.000€;
- c) 30 virtual participants – 450€;
- d) 10 participants with fewer opportunities – 1.000€.

It is planned to subcontract professional services for the development of the platform's graphic design, whose materials will be used in all the project's communication and dissemination media, with an expected real cost of 1.250€ (1.000€ included

in the lump sum of IPSantarem; the remaining part (20%) will be supported by IPSantarem).

It is also necessary to purchase services for:

- a) IPSantarém to pay the open access fees for the publication of the 1st scientific paper, a professional license of a content management system (CMS), a professional license for the management of the submission of abstracts/articles to the international conference (e.g. EasyChair) and for the enrolment of teachers in international conferences to promote the exploitation of the project results to other HE teachers – 4.698€;
- b) UCLan Chyprus pay the open access fees for the publication of the 3rd scientific paper, and for the enrolment of teachers in international conferences to promote the exploitation of the project results to other HE teachers – 2.000€;
- c) Thomas More to pay the open access fees for the publication of the 2nd scientific paper, and for the enrolment of teachers in international conferences to promote the exploitation of the project results to other HE teachers – 2.000€.

Activities - (5 - Strengthening the cooperation partnership & dissemination and exploitation of the project's results)

In the following sections, you are asked to provide details about each activity of the work package.

You are asked to provide information about each planned activity as a whole (e.g. its venue, duration, etc.), to define the activity's lead organisation, and optionally to list the other participating organisations. The lead organisation is typically the one organising the activity. The other participating organisations are all other project partners who will also take part in the particular activity. The estimated activity start and end dates can be changed during implementation.

Please specify each of the planned project activities in the table below

Description of the activities

Describe the content of the proposed activities.

A5.1: Develop and update an online platform that allows the dissemination and exploitation of innovative content, tools, and methodologies, openly available to all HE teachers and students.

The online platform will contain project general information and all the results, including MOOCs, videos, webinars, educational games (app), workshops, developed courses and international conference. All written content will be available in English, Portuguese, Italian, Greek, Dutch and Turkish.

A5.2: Organise focus groups with other HEI stakeholders namely HEI leaders and decision-makers such as course coordinators, to motivate the integration of the tools and approaches developed, in all curricula for HE students in all disciplines and at all levels. A report will be produced to summarize the information collected.

A5.3: Organize and streamline the International Conference for exploitation of the projects' results (virtual & on-site)
The final conference will bring together stakeholders in the field of Education for SD. It will seek to promote discussion, knowledge and exchange of experiences in this field and for the SDGs in particular. International speakers of recognised competence will be invited to enrich the sharing of experiences. This event also contributes to strengthening of the cooperation partnership.

A5.4: Present the project results at international conferences

This activity foresees the oral or poster presentation of the results of WP2, WP3 and WP4 in international conferences.

A5.5: Publish the project's scientific papers

This activity foresees the publication of the scientific papers developed in WP2 and WP4 in indexed international scientific journals.

A5.6: Transnational project meetings

This activity comprises 7 transnational meetings, 4 on-site and 3 virtual meetings, where a detailed planning must be developed and reviewed, allowing, at the same time, to share experiences, joint learning, and strengthening the cooperation partnership.

Explain how this activity is going to help reach the WP objectives.

Each activity will contribute to the achievement of the WP objectives as follows:

A5.1 - The online platform will contain not only the project information but all the results obtained with the project. This activity enables reaching O4.2.

A5.2 - The focus group will contribute explicitly to the exploitation of the project results, encouraging leaders and decision-makers to adopt the project tools and methodologies for the teaching of SD/SDGs, in a transversal way, and at all HE teaching levels. This activity enables reaching O4.3.

A5.3 - The international conference will contribute to: a) widely disseminate the results of TIME2ACT@SD to HE teachers and HE decision-makers; b) encourage research in the area of Education for SD; c) share active methodologies and innovative practices for formal and non-formal education of HE students, in the field of SD and SDG; d) encourage the use of educational games and the use of gamification strategies for HE, contributing to innovative and appealing educational practices. This activity enables reaching O4.4 and O4.5.

A5.4 - This activity aims to take advantage of the dissemination of the project and its results to other HEI stakeholders, both at international events held within the members of the partnership, and at HEIs outside the partnership. This activity enables reaching O4.5.

A5.5 - The publishing of the project's scientific papers will allow the results to be disseminated to an international audience (all HEI stakeholders). This activity enables reaching O4.5.

A5.6 - The transnational project meetings will allow: a) to plan in detail the activities to be developed; b) to share experiences and good practices in the relevant areas of the project (e.g, sustainability, gamification, innovative educational tools); c) to reinforce the cooperation partnership; d) to envisage future partnerships considering more complete exploitation of the results obtained. This activity enables reaching O4.1.

Describe the expected results of the activities.

R5.1: Online platform.

Website structure and update with the information produced throughout the duration of the project. It will include information and resources on the project, MOOC, videos, webinars, educational games (app), workshop, developed courses and

international conference. All written project outputs will be produced in English, Portuguese, Italian, Greek, Dutch and Turkish. Dissemination of project results (e.g., MOOC, webinars) on Erasmus+ platforms (such as NAU and School Education Gateway) as well.

R5.2: Record of stakeholders' meeting conclusions.

Report including the conclusions of the focus groups carried out with the HEI stakeholders regarding the opportunities to exploit the project results.

R5.3: International conference as multiplier event.

Hybrid event (on-site and online) with the participation of HE teachers, researchers, students and decision-makers, held in IPSantarém (Portugal), for dissemination and exploration of the project results. Official language of the conference: English.

R5.4: Oral communications at international conferences on project outputs.

Oral or poster communications by members of the partnership on international congresses.

R5.5: Scientific papers published.

Scientific papers developed in WP2 and WP4 published in international journals.

R5.6: Reports of transnational meetings.

After each transnational project meeting (online or face-to-face) a report will be drawn up with the conclusions and main decision of the meeting. It is planned to produce 7 reports.

Expected number and profile of participants.

The focus group with HEI stakeholders will involve (expected numbers): HE teachers (20), HE leaders, course coordinators or other decision-makers (15), other stakeholders (5).

In the International conference, it is expected to involve a set of participant profiles (expected number): Local participants (65), foreign participants (5), online participants (30), number of participants with fewer opportunities (10).

The HEI team members will participate in international conferences (to disclose the knowledge produced). It is expected to involve at least 10 participations from the partnership, distributed by multiple events.

The team members will also participate in transnational meetings of the project (expected numbers):

- On-site kick-off meeting (IPSantarém): 6 participants from IPSantarém, 1 participant from Rosto Solidário and 2 participants from each of the other partners. Total: 17 participants.
- online transnational project meeting #1: Project coordinator, 2 participants from organizer institution and 1 participant from each of remain partners. Total: 9 participants.
- On-site transnational project meeting (Italy): 2 participants from Galileo-IT, project coordinator and 2 participants from each of the other partners (Rosto Solidário with 1). Total: 14 participants.
- On-site transnational project meeting (Cyprus): project coordinator and 2 elements from each partner (Rosto Solidário with 1). Total: 14 participants.
- online transnational project meeting #2: Project coordinator, 2 participants from organizer partner, and 1 participant from each partner. Total: 9 participants.
- online transnational project meeting #3. Project coordinator, 2 participants from organizer partner and 1 participant from each partner. Total: 9 participants.
- On-site final transnational project meeting (IPSantarém): 6 participants from IPSantarém, 1 participant from Rosto Solidário and 2 participants from each of the other partners. Total: 17 participants.

Please keep in mind that the Erasmus+ Programme is offering co-financing for your project. This means that the EU grant can only cover a part of the project costs, while the rest must be covered by the participating organisations either in form of additional funding, or in form of invested goods, services and work.

Budget Summary

This section provides a summary of the estimated project budget. The table is automatically completed taking into account the described work packages and their estimated cost.

Budget Items	Allocated amount (EUR)
Work package n°1 'Project Management'	48 960,00
Work package n°2 - Transnational studies with HE students and teachers	10 689,00
Work package n°3 - Development of interactive content and digital/innovative tools	64 267,00
Work package n°4 - SD/SDG training Workshops and Bootcamps	65 189,00
Work package n°5 - Strengthening the cooperation partnership & dissemination and exploitation of the project's results	60 895,00
Total	250 000,00

Distribution of the grant amount among participating organisations

WP	Coordinator (EUR)	Partner 1 (EUR)	Partner 2 (EUR)	Partner 3 (EUR)	Partner 4 (EUR)	Partner 5 (EUR)	Partner 6 (EUR)	Total (EUR)
Work package n°1 'Project Management'	12 240,00	6 120,00	6 120,00	6 120,00	6 120,00	6 120,00	6 120,00	48 960,00
Work package n°2 - Transnational studies with HE students and teachers	3 425,00	274,00	4 280,00	1 926,00	428,00	208,00	148,00	10 689,00
Work package n°3 - Development of interactive content and digital/innovative tools	7 507,00	11 261,00	9 350,00	12 412,00	10 097,00	8 012,00	5 628,00	64 267,00
Work package n°4 - SD/SDG training Workshops and Bootcamps	14 079,00	15 766,00	13 723,00	3 831,00	2 761,00	2 497,00	12 532,00	65 189,00
Work package n°5 - Strengthening the cooperation partnership & dissemination and exploitation of the project's results	24 133,00	7 656,00	7 456,00	7 364,00	5 104,00	3 213,00	5 969,00	60 895,00
Total	61 384,00	41 077,00	40 929,00	31 653,00	24 510,00	20 050,00	30 397,00	250 000,00
Project lump sum (EUR)								250 000,00

Impact

How are you going to assess if the project objectives have been achieved?

In order to assess if the project objectives have been achieved, different monitoring levels must be considered, either in the short or long term and in every stage of the project.

Short-term impact indicators can be assessed during the implementation of the project in its 5 WP. Qualitative and quantitative indicators were set in all WP, as well as the targets for the assessment of the quality of the results. These elements were widely discussed and consensual among the various partners involved.

Long-term indicators can also be defined, setting a follow-up approach 6 months to 1-year post-implementation, to make the assessment of the impact of the project.

Some follow up indicators:

- HE Students: knowledge about the topics involved; insight in practical applications.
- HE Teachers: implementation of active learning methods at different levels of education.
- HEI: staff meetings related to the project take place; involvement of the senior management and the school principal; the number of teachers actively involved; the number of students actively involved; the number of open badges granted.

Explain how you will ensure the sustainability of the project: How will the participation in this project contribute to the development of the involved organisations in the long-term? Do you plan to continue using the project results or implement some of the activities after the project's end?

TIME2ACT@SD ideation and design process was focused on long-term sustainability. There is a strong intention to integrate the SD topic in the HEIs as a supplement to the curricula (through courses awarding ECTS). This will ensure that what is implemented during the project lifetime will endure for some time afterward and strengthen the students' profile. With a higher level of teachers' confidence to address the SD topic in the next generation of students, will make the adoption of a SD/SDG approach as the new normal at a faster pace.

We also highlight that the dissemination and exploitation will be extended beyond the duration of the project. In the final phase of the project, focus groups will be carried out with HE leaders and course coordinators that envisage the future integration of the tools and methodologies developed in formal education (transversally and at various levels of education).

The major project deliverables will continue to be further developed beyond the lifetime of the project and will be made available using Creative Commons license. We will maintain the online platform to ensure that the project outcomes are available for future use by HE teachers and students, both within and outside the partnership. This way HE teachers may integrate the main results of the project into their one practice. The written pedagogical materials (such as MOOC) and online platform are presented in English, Portuguese, Italian, Greek, Dutch and Turkish, and, being open access, may easily be translated and adapted to other languages and contexts.

In addition, the impact of innovative methodologies in changing HE students' skills and attitudes will be disseminated in international scientific articles and conferences, which aim to encourage the international community of HE teachers to adopt the new approaches.

Part of the projects' sustainability will be assured by the snowball effect in 2 ways: (a) we are confident that participant teachers and students will integrate sustainable activities in their practices on a regular basis during and beyond the project life cycle; (b) by establishing a network between different HEI and worldwide communities, we will reach a wider audience. In this way, TIME2ACT@SD will provide an example of good practices in institutional cooperation between countries, HEI's with different disciplines and local partners. This brings a long-lasting effect on their openness to SD education and the promotion of active citizenship.

In conclusion, TIME2ACT@SD will have a practical and lasting contribution in terms of changing attitudes and behaviours in HE students, thus responding to the UN/UNESCO call for the integration of sustainability in HE students' education. TIME2ACT@SD is a response that fits in SDG 4 (Quality Education), in the initiatives of Education for Sustainable Development, and a contribution to the UN 2030 Agenda for SD.

Please describe the potential wider impact of your project: Will the impact be equally spread among the involved organisations? What is the potential impact of the project on each participating organisation as a whole? Are there other groups or organisations at local, regional, national or European level that will benefit from your project? Please explain how.

After the implementation of the project, the results will reach the whole community of HEIs and local partners, both in the strategic level of the HEIs and in the practical level of everyday work. The most important impact on the participating organisations is the development of a network of regional, national, and transnational cooperation and collaboration that will last beyond the project life cycle.

The project will have an overall impact on participating HEI, students, teachers, various educational institutions, and local communities. TIME2ACT@SD will impact the participants, by strengthening the profile of teachers and students since they

will be able to: (a) address SDG in a more confident way into their practices and daily life, by building new tools and new paths to solve the difficulties related to this theme; (b) deal with diversity in the classroom by creating an inclusive and equitable environment for learning and playing; and (c) adopt collaborative and innovative practices concerning the sustainable education. TIME2ACT@SD will also impact participants by promoting the acquisition of digital and soft skills and competences through effective and innovative practices in the field of SD.

The participation as a transnational team and the mobilities may introduce partners to new ways of thinking that will have an immediate effect by adopting good practices. Based on the better understanding of other partners, their cultures and methodologies, the project will involve relevant new elements that will modify or update organizational practices.

As for the participating organisations impact, each partner is provided with unique experiences, like the workshop/bootcamp, and this knowledge can be further exploited in strategic planning of the HEIs policies and curricula. For those who attend the workshops, Mooc and Bootcamps will have ECTS as a supplement to their Diplomas (1 workshop (1 ECTS); 3 Mooc (1 ECTS); 1 Bootcamp (2 ECTS)).

The work on the project involves participants from different countries across Europe and Turkey and the results of the common work will have impact, not only on local level, but also regional, national, and international via the identification and analysis of the differences and similarities that lead to the recognition of common models and activities, etc., relating to good practice for the promotion of literacy and skills development of HE students in SD and particular in SDG. TIME2ACT@SD will contribute with results that can be useful to all the interactional community in the field of Education for Sustainable Development, answering the United Nations call to integrate the theme in formal and non-formal education of HE students.

Other groups that will benefit from the project are other HE institutions, the scientific community, policymakers, local authorities, the national agencies, and the community in general, in local, regional, national, and European context.

Please describe your plans for sharing and promoting the project results: How do you intend to make the results of your project known within your partnership, in your local communities and in the wider public? Who are the main target groups you intend to share your results with?

The project's online platform public space will be used for further dissemination of the project's results within the partnership, making it also available for a wider audience across Europe (and worldwide). The online platform that will gather all the projects' materials and contents will be maintained through IPSantarem web server as a sustainable development process. With respect to the educational materials, these shall become available under a Creative Commons Licence, thus effectively establishing Open Educational Resources.

On a continuous base, results will be shared between partners in a collaborative platform (e.g., Asana integrated in Microsoft Teams) and online contact among partners and the coordinator will ensure the effectiveness of cooperation and communication of results.

The scientific papers will be published in international open access scientific journals widely disseminated to all academic audiences. Summary of papers, the events, learning and training activities and project results will be published in partners' newsletters for dissemination of the project.

All the information, documents, materials will be accessible through the partners websites (besides the project platform). A direct link to the project online platform will be added in the official websites of each partner.

TIME2ACT@SD partners are aware of the needs of promotion activities to make policies and school practices changes in the long term. Therefore, partners will produce direct and indirect promotion of results at different levels to be able to reach the main target groups: HE teachers, HE students, other HE institutions, the scientific community, policymakers, local authorities, the national agencies, and community in general, in local, regional, national and European context.

To promote projects' results, we intend to:

- a) organise free and open webinars, a virtual workshop and an international conference where the interested population can freely access the results and the evolution of the project;
- b) organise focus groups with other HEI stakeholders (e.g., HEI leaders, course coordinators) to motivate the integration of the tools and approaches developed, in all curricula for HE students in all disciplines and at all levels;
- c) publish papers in open access journals and conferences and make available the documents in the Open Access HE Repositories;
- d) to share the MOOC in other national and international platforms (e.g., NAU and School Education Gateway).

At the end of the project, we would show and share the results with regional, national and European institutions and scientific community, multiplying the network of potential beneficiaries of the replication of the TIME2ACT@SD in different contexts internationally.

Project Summary

Please provide a short summary of your project. Please be aware that this section (or parts of it) may be used by the European Commission, Executive Agency or National Agencies in their publications. It will also feed the Erasmus+ Project Results Platform.

Be concise and clear and mention at least the following elements: context/background of project; objectives of your project; number and profile of participants; description of activities; methodology to be used in carrying out the project; a short description of the results and impact envisaged and finally the potential longer-term benefits. The summary will be publicly available in case your project is awarded.

In view of further publication on the Erasmus+ Project Results Platform, please also be aware that a comprehensive public summary of project results will be requested at report stage(s). Final payment provisions in the contract will be linked to the availability of such summary.

Objectives: What do you want to achieve by implementing the project?

TIME2ACT@SD aims to contribute to the development of knowledge, skills, and attitudes, as well as changing of behaviours among European higher education (HE) students, in the field of sustainable development (SD) and SD Goals (SDG), through the development of interactive content, digital tools, and innovative teaching methodologies, based on the use of the gamification, for HE teachers' use in formal and non-formal education.

Implementation: What activities are you going to implement?

TIME2ACT@SD will be developed through:

- a) Transnational studies with HE students and teachers to identify skills' gaps on the SD/SDG topic;
- b) Development of interactive content and digital/innovative tools, namely using immersive and gamification approaches;
- c) SD/SDG training workshop and bootcamps to promote HE students' attitudes and behaviours changing through learning by doing;
- d) Strengthening the cooperation partnership and exploitation of the project's results to other HEI stakeholders

Results: What project results and other outcomes do you expect your project to have?

The TIME2ACT@SD results will be:

- 3 transnational studies with HE students and teachers about SD topics (scientific papers);
- 3 MOOC and 3 webinars aiming to promote the HE students' literacy on environmental, social and economic sustainability;
- web/mobile based and immersive games on SD;
- 1 virtual workshop on educational games;
- 2 sustainability bootcamps;
- 1 online platform;
- focus groups with HEI stakeholders;
- 1 international conference.

Annexes

The maximum size of a file is 15 MB and the maximum total size is 100 MB.

Declaration on Honour

Please download the Declaration on Honour, print it, have it signed by the legal representative and attach.

File Name	File Size (kB)
DOH -declaration-on-honour_IPSantarem_Time2ActSD, assinada.pdf	364
Total Size (kB)	364

Mandates

Please download the mandates, have them signed by the legal representatives and attach them here. You can add a maximum of 90 documents.

Please ensure that mandates are valid before submitting them to the National Agency. Mandates shall be provided at the latest before the signature of the grant agreement.

File Name	File Size (kB)
MAN -Mandate_Rosto Solidario, assinada.pdf	115
MAN -Time2Act.mandate.Galileo, assinada.pdf	115

Checklist

Before submitting your application form to the National Agency, please make sure that:

- ☒ It fulfills the eligibility criteria listed in the [Programme Guide](#).
- ☒ All relevant fields in the application form have been completed.
- ☒ You have chosen the correct National Agency of the country in which your organisation is established. Currently selected NA is: PT01 - Agência Nacional Erasmus+ Educação e Formação

Protection of Personal Data

Please read our privacy statement to understand how we process and protect [your personal data](#)

Please also keep in mind the following:

Mandates of each partner to the applicant, signed by both parties, should be submitted latest before the signature of the grant agreement. If the application is approved for funding, signed mandates will be considered as a condition for signature of the grant agreement.

The documents proving the legal status of the applicant must be uploaded in the Organisation Registration System, here: [Organisation Registration System](#)
